

Become a Manager of AI Agents

Build Your Personal AI Workforce

One-day instructor-led workshop · Participant Workbook — Compact Edition

Participant name	_____
Organization / team	_____
Role	_____
Date	_____
City	_____

How to use this book

This is a **workshop companion**, not a textbook. Listen to the instructor. Use these pages to capture ideas, complete exercises, and take home a plan you can use later. Write in the blanks. Leave pages messy. The value is in *your* notes, not the printed text.

Where you see *italic starters* or an “e.g.” — those are **examples to steal and adapt**, not the “right answer.” Cross them out and write your real work.

Roadmap = instructions. Each task’s **Copy** box lives on the roadmap website. This book is for writing, worksheets, and notes — not a second prompt dump.

Finding a page: Use the **page number at the bottom center** (same as the PDF viewer). Headers say **Sec XX** for the chapter.

The story of the day

Work WITH AI	→	Work THROUGH AI	→	Work BY AI
↓		↓		↓
AI helps YOU at your job		AI runs THE JOB on a clear path		YOU manage AI like a small team

Stage	Plain meaning	Workplace example
WITH	AI sits next to you and helps	A capable junior at your desk
THROUGH	AI helps run a recurring process	Reception → desk → approval
BY	You coordinate specialist AI roles	You are the manager; AI does the drafting

Product of the day: One real work process that can run like this:

Trigger → AI step → Output where work lives → Human approval for anything risky

Day map (fill as you go)

Block	Focus	Time (approx.)	Tasks	My status
Opening	What AI is · expectations · Teacher Agent	~35 min	0.0–0.4	☐
Session 1	Work WITH AI	~90 min	1.1–1.6	☐
Break		15 min		☐
Session 2	Work THROUGH AI	~105 min	2.0–2.6	☐
Lunch / break				☐
Session 3	Work BY AI · Demo Day · 30-day plan	~115 min	3.0–3.6	☐

My painful process for today (one sentence):

<i>Starter:</i> “Every Friday I scramble WhatsApp notes into a manager update and numbers go wrong.”

What “done” looks like:

e.g. “Friday 4pm: one approved email draft in Gmail, numbers checked, ready to send.”
--

Become a Manager of AI Agents · Participant Workbook · Sec 02

Contents — Page Guide

Instructors may say “open **Sec 10**” or “Task **1.1**.” In this edition the **Sec number is also the page number**. Task serials match the roadmap website and slides: **0.0→0.4 · 1.1→1.6 · 2.0→2.6 · 3.0→3.6**.

Sec	Block	Title	Tasks

Become a Manager of AI Agents · Participant Workbook · Sec 03

SESSION 0 — Housekeeping + Opening

Goal: Shared language + one Teacher Agent you will use all day.

 **TASK 0.0 (~5 min) — What is AI? What to expect / not expect**

Do: Follow the instructor. On this page, write one line you **expect** today and one you will **not** expect.

Done when: Both lines written. Mark roadmap **0.0** complete.

What is AI — in plain words:
Software that learns patterns from large amounts of data and produces useful outputs — text, summaries, suggestions, classifications — without you writing every rule by hand.

Analogy: A **very fast new junior** who has read a huge library. They draft quickly and **sound confident**. They still invent details when unsure. They need a manager who briefs them, checks the work, and decides what leaves the room.

What is Generative AI: AI that creates *new* content from a prompt — emails, reports, Bangla/English rewrites, slide outlines — instead of only retrieving a fixed answer.

Traditional software is a **fixed menu**: press button → same dish. Generative AI is a **skilled cook**: give ingredients and instructions → a new plate each time. **Taste before you serve.**

What AI is good at today

Strong	Weak / risky
Drafting and rewriting	Final hiring, legal, budget, or credit decisions
Summarizing long text	Inventing “facts” when sources are missing
Turning rough notes into structure	Knowing your latest internal policy unless you provide it
Brainstorming options	Sending emails, publishing, or approving alone

Callout — Manager mindset
You do not need to “become a programmer.” You need to become a **clear brief-giver and quality checker**.

I expect today: _____

I do *not* expect today: _____

Where I already manage juniors (brief → review → approve): _____

AI vs traditional software

	Traditional software	Generative AI
How it works	Fixed rules and forms	Predicts likely next words / patterns
Same input	Same output every time	Similar but not identical
Best for	Calculations, records, workflows that must not invent	Drafting, summarizing, exploring options
Risk	Wrong rule → wrong result (usually consistent)	Confident wrong answer (“hallucination”)
Your job	Configure and operate	Brief, constrain, and review

Callout

Use traditional software (HRIS, ERP, CRM) for **truth that must not drift**. Use generative AI for **language, structure, and first drafts**. AI should never “invent” a leave balance or invoice total.

When would you use which? (circle one per row)

Task	System of record	Generative AI	Both + human
Check leave balance or payroll total	☐	☐	☐
Write a polite follow-up email to a vendor	☐	☐	☐
Decide final hiring / budget / credit approval	☐	☐	☐
Summarize 20-page policy for new-joiner training	☐	☐	☐

Chatbots vs AI Assistants vs AI Agents

Type	Picture	What it means
Chatbot / chat	Hallway question to whoever is free	One-off Q&A; little standing brief
AI Assistant	Hired desk assistant with a joining letter	Project/Settings = standing role; you still drive
AI Agent / workflow	Routed office process: intake → desk → approval	Steps, tools, and rules; human still approves high risk

Chat

→ “Help me rewrite this email.”

Assistant

→ “You are my Work Assistant for weekly reporting. Always ask if numbers are missing.”

Agent path

→ Form arrives → AI drafts → Sheet updates → Manager approves before send

Become a Manager of AI Agents · Participant Workbook · Sec 05

Opening tasks (Session 0)

 **TASK 0.1 (~5 min) — Open your tools**

Do: Open this **roadmap** · ChatGPT or Claude (ready for a Project). Optional: blank note for scratch. Copy boxes for later tasks live on the roadmap.

Done when: Roadmap + AI tool open. Mark roadmap **0.1** complete.

 **TASK 0.2 (~10 min) — Create Teacher Agent**

Do: Create Project Workshop Teacher – Agentic AI → open **Settings** (not chat) → paste the roadmap **Copy** box once → Save.

Done when: Settings saved. Mark roadmap **0.2** complete.

 **TASK 0.3 (~10 min) — Kickoff chat with Teacher**

Do: In Teacher **Chat** (same thread all day), send the roadmap **Copy** box (role, org, painful process). Answer Teacher’s 3 questions in the **same** chat.

Done when: Teacher has your process right. Mark roadmap **0.3** complete.

 **TASK 0.4 (~5 min) — Chat vs assistant vs agent**

Do: In the **same Teacher chat**, send the roadmap **Copy** box. Write one sentence you will remember in the checkpoint below.

Done when: One remember-sentence written. Mark roadmap **0.4** complete.

Checkpoint — Write one sentence you will remember

Teacher vs Work Assistant (don’t mix them up)

	Teacher Agent	Work Assistant
Job	Coach / critique / explain	Do <i>your</i> real work
When	Same one chat thread all day	Session 1 runs + later as your worker
Switch	—	Once at Task 1.3 (feedback round), not every task

Prompt Engineering (clear instructions)

In plain words: A prompt is a work brief. Better briefs → better first drafts. You still review.

Simple prompt recipe (CTAO)

Letter	Meaning	Example
C	Context	"I am an Operations Lead at a corporate office in Dhaka."
T	Task	"Draft a follow-up email after yesterday's vendor meeting."
A	Audience / constraints	"Polite, under 120 words, no new commercial promises."
O	Output format	"3 options. Label A/B/C."

Weak vs stronger

Weak	Stronger (CTAO)
"Make this email better."	"Context: Ops lead, Dhaka office. Task: rewrite this vendor follow-up. Audience: polite, under 100 words, no new price promises. Output: 2 options A/B + 3 risks I should check."

Exercise — Rewrite your weak prompt

My weak prompt:

My stronger prompt (use CTAO):

After AI replies — Stop → Read → Decide

Check	Yes / No
Facts match what I know?	☐ / ☐
Tone safe for customer / boss?	☐ / ☐
Anything invented?	☐ / ☐
Ready to send as-is?	☐ / ☐

Become a Manager of AI Agents · Participant Workbook · Sec 07

Hallucination

In plain words: AI invents details that sound right but are not true — fake citations, wrong numbers, made-up clause numbers, imaginary employee or customer facts. A confident junior filling gaps so the board pack “looks complete.”

High-risk zones

- Headcount, salary, bonus, or budget figures
- Legal, HR, or compliance wording (“policy says...”) without a source
- Customer or employee PII · marketing and competitor claims
- Promises to clients, vendors, or candidates · rates, fees, EMI, regulatory language

Detection habits: ask for a source or “say unknown” · spot-check numbers against the system of record · prefer “draft + checklist” over “final answer.”

Human-in-the-loop

In plain words: A human must approve steps that affect customers, money, legal/compliance, people decisions, or public reputation.

Green / Blue / Red (kitchen tags) — same meanings all day

Tag	Meaning	Examples
 Green	AI thinking OK	Draft, summarize, rewrite, brainstorm
 Blue	Rules / automation OK	Forms, reminders, moving data, triggers
 Red	Human only	Hiring, legal, conflict, budget/credit decision, send externally without review

Always human before...

- [] External email / SMS / WhatsApp to customer, vendor, or candidate
- [] Changing official records (HRIS, ERP, CRM)
- [] Publishing marketing / social posts · HR letters with pay or exit language
- [] Hiring, budget, legal, credit, or compliance decisions

My personal red lines

e.g. (1) Any email leaving the company (2) Numbers in a manager pack (3) HR letters with pay language

1. _____
2. _____
3. _____

Become a Manager of AI Agents · Participant Workbook · Sec 08

SECTION 1 — Work WITH AI

Goal: Use AI as a daily helper — clear instructions, the right tool, and human judgment.
Task order: 1.1 → 1.2 → 1.3 → 1.4 → 1.5 → 1.6 (lock the job before tools).

Worksheet A — Work Assistant Brief

TASK 1.1 (~5 min) — Fill your Work Assistant brief

Do:

Complete the brief below first (paper — no AI yet). Keep it short enough that a stranger could follow it.

Done when:

Brief filled. Mark roadmap 1.1 complete.

TASK 1.2 (~20 min) — Create Work Assistant + three real runs

Do:

New Project My Work Assistant — [Your Name] → paste your brief into **Settings** (add “Never invent meetings, names, or deadlines” if missing) → run the **three** prompts from the roadmap **Copy** boxes in that chat. Read each answer before the next.

Done when:

Three runs done. Mark roadmap 1.2 complete.

TASK 1.3 (~15 min) — One feedback round (Teacher ↔ Work Assistant once)

Do:

In Teacher chat, send the roadmap **Copy** box (brief + weak prompt + one reply). Keep fixes you agree with → update Work Assistant **Settings** once → re-run **one** task.

Done when:

Settings updated + one re-run compared. Mark roadmap 1.3 complete.

Italic starters are examples — cross them out and write yours.

Field	Your answer
Role title	Executive Assistant for e.g. Operations Lead — weekly reporting & vendor follow-ups _____
Top 3 priorities	1. e.g. Turn rough notes into clear updates 2. e.g. Draft polite follow-ups 3. e.g. Flag missing numbers ____
Tone	☐ Formal ☐ Friendly-professional ☐ Concise bullets ☐ Bangla-first ☐ English-first
Always ask me before...	e.g. Sending externally · inventing a deadline · using any figure I did not provide _____
Never invent...	e.g. Metrics, headcount, prices, policy clauses, people’s names not in my notes _____
Output style	e.g. Short bullets first, then optional full draft; end with “Human must check:” _____
Success looks like	e.g. I can paste 5 messy bullets and get a usable draft in under 2 minutes _____

Three real tasks I will run today — rewrite one real email · clean one meeting note into actions · draft one weekly update

#	Task	Done?
1		☐
2		☐
3		☐

What I changed in Settings after Teacher critique: e.g. Added “never invent numbers” _____

Worksheet B — Lock today's process

TASK 1.4 (~10 min) — Lock today's process

Do: List 2–3 candidate processes. Plot each on **Impact vs Effort** (below). Pick the winner. Write name · pain · done today · what stays human. Then send the roadmap **Copy** box in Teacher chat. If Teacher says too big, take the smaller slice. Do **not** pick tools yet.

Done when: Process locked for the rest of the day. Mark roadmap **1.4** complete.

Next: tools (1.5) → memory (1.6) for *this* job. **Session 2** turns **this same locked process** into a path that can run.

One recurring job for the rest of the day — not the whole company. Start with low-hanging fruit: high impact, lower effort.

Pick your process — Impact vs Effort

	Low effort (data ready, tools OK, few approvals)	High effort (messy data, IT blocks, many sign-offs)
High impact (saves hours / many rows)	Best start — put candidate #1 here	Phase 2 — after you ship one win
Low impact (nice-to-have)	Maybe later	Skip for now

My candidates: 1. _____ 2. _____ 3. _____

Winner for today: _____

	Starter (steal & adapt)	Write yours
Process name	Weekly team update from Friday bullets	
Who starts it?	Me — I paste bullets / fill a Sheet row	
Who receives the output?	My manager (email draft)	
How often?	Weekly	Daily / Weekly / Monthly / Ad hoc
Pain today	Last-minute scramble; numbers sometimes wrong	
Smallest useful slice for <i>this</i> workshop	Bullets → draft update → I approve before send (<i>not “automate all reporting”</i>)	

Green / Blue / Red first sketch (optional — refine in Session 2; tag key on **Sec 08**)

Step (rough)	 /  / 
Collect bullet points or requirements from team	 or you
AI drafts the update	
I check numbers & send	

Become a Manager of AI Agents · Participant Workbook · Sec 10

Choosing the right AI tool

🚩 TASK 1.5 (~30 min) — Tool landscape + fit (max 2–3) for the locked process

Do: Watch the short tool tour. With your locked process from 1.4, send the roadmap **Copy** box to Teacher. Run **one** identical test only in the recommended tools (max 3). Write today's stack below.

Done when: Stack written (max 3). Mark roadmap 1.5 complete.

Rule of the day: Lock **one job** first. Then pick ≤3 **tools** for that job. Do not open every shop in the market.

Tools change fast. Brand names here are **examples for today**. Learn the **core job** each tool does, then pick whatever your company allows.

Five lanes (A–E) — jobs, not brands

Lane	Core job	What it does for you	Example tools (illustrative)
A	Think & draft	Writes, rewrites, critiques, plans	ChatGPT, Claude
B	Research web	Finds current public info + links	Perplexity, Gemini
C	Your files	Answers from <i>your</i> PDFs / SOPs	NotebookLM, Projects with uploads
D	See / hear / show	Images, voice, slides, screenshots	Gemini, Gamma, ChatGPT images
E	Connect & run	Trigger → AI → Doc/Sheet/email draft	Zapier / Make / n8n (+ Forms/Sheets)

Fit questions: (1) Do I need one finished draft — or many steps? (2) Must the answer come from **company files**? (3) Will a human approve each sensitive step?

My stack for today's locked process (max 3)

Starter stack many people use: ChatGPT or Claude (Work Assistant) · NotebookLM or Project files (SOPs) · Google Form/Sheet (trigger).

#	Tool	Why this job needs it
1	<i>e.g. Claude / ChatGPT</i>	<i>Standing Work Assistant + drafts</i>
2	<i>e.g. NotebookLM</i>	<i>Answers from our handbook PDF</i>
3	<i>e.g. Google Form → Sheet</i>	<i>Trigger / inputs</i>

Callout — Privacy

Do not paste employee/customer NID, salaries, passwords, medical details, or confidential contracts into public tools unless your organization has approved that use.

Exercise — Match the *job type* (A–E), then name a tool

Job	Core job (A–E)	Tool you would try
Summarize our leave policy PDF with page refs	—	—
Rewrite angry customer/vendor email, polite Bangla	—	—
Find recent public news on our industry / competitors	—	—
Standing weekly Work Assistant for your team update	—	—
Turn bullets into a first-pass slide outline	—	—
Form submit → draft lands in a Doc for my review	—	—

Become a Manager of AI Agents · Participant Workbook · Sec 11

Context

In plain words: Context is everything AI needs *in this conversation* — role, product, audience, constraints, and the actual content (notes, policy excerpt, table). Like briefing a new hire *before* they write a customer letter.

Did I give enough context? ☐ Who I am / my role · ☐ Who the audience is · ☐ The raw material · ☐ What “good” looks like · ☐ What is forbidden

Memory

TASK 1.6 (~10 min) — Memory — docs + grounded questions for the locked process

Do: Upload 1–2 allowed work docs for your locked process (NotebookLM or Project files). Ask two questions the docs can answer. Ask one trap question that is **not** in the docs — did it refuse or invent?

Done when: You verified one citation and saw the trap fail safely. Mark roadmap **1.6** complete.

In plain words: Memory is what sticks beyond one message — Project instructions, uploaded files, past chat in the same thread, saved preferences.

Kind of memory	Workplace picture	Example
Instructions / Settings	Joining letter / handbook	“Never invent numbers or policy clauses.”
Files	Company file on the desk	Policy PDF, product FAQ, SOP
Chat history	Ongoing conversation at the desk	“Use my process from earlier.”
Your brain	Manager judgment	You still know what is true today

Callout — Grounding

Give the junior the **company file**, not corridor rumors. If the file is missing, good AI should say “I don’t know” — not invent policy.

Exercise — What should my Work Assistant always remember?

Always know	Never invent
e.g. My role, Bangla/English preference, weekly update format	e.g. Headcount, salary, revenue, deadlines I did not give

Section 1 — Reflection

1. What changed in how I brief AI after this morning?
2. Which habit will I keep: better prompts, memory/files, or human-in-the-loop?

SECTION 2 — Work THROUGH AI

Goal: Turn one messy process into a reusable path — map, rules, pattern, and a run that works once.

Bridge from Session 1
In **Task 1.4** you locked **one** recurring job. Session 1 = AI helped you. Session 2 = that **same job** becomes a **path that can run** (not a blank chat every time).

My locked process from Task 1.4:

Session 2 spine (why this order — follow top → bottom)

① Picture the destination

② How tall is the build?

③ What happens on the floor?

④ Learn ETCSLV → write it

⑤ Pick the room

⑥ Hire the standing brief

⑦ Open for business

Anatomy: Trigger → AI → Output → Human approval

Pattern ladder (Task 2.0)

Map steps + ● AI thinking / ● rules / ● human (Task 2.1)

Framework page → Worksheet D (Tasks 2.2–2.3)

Decision tree → lock one pattern (Task 2.4)

Workflow brain in Settings (Task 2.5)

Make it run once – Track A or Track B (Task 2.6)

What is an AI workflow? A **repeatable path**: something starts the work → AI (and maybe other systems) do clear steps → a result appears where your team already works → a human still owns risk. Reception → desk → manager approval. AI can sit at some desks; it should not steal the manager’s approval.

Anatomy of a running workflow (remember this picture)

TRIGGER (form, email, sheet row, checklist)	AI / SYSTEMS (draft, extract, classify, route)	OUTPUT (Doc, Sheet, draft email, Slack)	HUMAN (approve / edit / reject)
--	--	--	---------------------------------------

Tools in Session 2: Teacher chat for **2.1, 2.3, 2.4, 2.5** only · chatbot Project (or NotebookLM if file-heavy) for 2.5 · **Track A** n8n/Make/Zapier clone **or Track B** semi-auto for 2.6. Tasks **2.0** and **2.2** are paper/discussion — no forced chat.

You will **not** automate yet. First choose height (ladder), map steps, write rules, lock a pattern, write the brain. Automation comes at **Task 2.6**.

Become a Manager of AI Agents · Participant Workbook · Sec 13

Pattern ladder (how much structure?) – Step ②

TASK 2.0 (~5 min) – Pattern ladder + readiness

Because: You locked one job — now ask how much structure *that* job needs (don't jump to n8n yet).

Do: Rate yourself 1–5 on the readiness table below. Listen to the instructor on the ladder. Circle your rung. Discuss with a neighbour if unsure. **No Teacher chat required.**

Done when: Rung noted below. Mark roadmap 2.0 complete.

Readiness self-score (1 = weak · 5 = strong)

Dimension	1	2	3	4	5	Notes
Data readiness (clean inputs exist?)	☐	☐	☐	☐	☐	
Tool / IT access (apps you need?)	☐	☐	☐	☐	☐	
Risk appetite (OK with AI draft before you send?)	☐	☐	☐	☐	☐	
Change capacity (team can adopt in ~30 days?)	☐	☐	☐	☐	☐	

Climb only as high as *this* route needs:

1 Instruction-only chat
 2 Knowledge assistant (your files)
 3 Single workflow agent (clear steps + you approve)
 4 Multi-agent / role handoff
 5 Automation pipeline (trigger → run)

Bicycle → scooter → van → small fleet → factory. Do not buy a factory for a bicycle trip.

My ladder rung for today: e.g. Level 3 — single workflow agent _____

Knowledge assistants, Projects & the workflow brain

Knowledge assistant / RAG: before answering, the system **finds relevant passages from your files**, then writes an answer grounded in those passages (ideally with citations). Instead of guessing leave rules from memory, the junior **opens the HR binder**, then drafts. *Still your job:* verify citations; update files when policy changes.

Idea	Meaning
Reusable assistant	Same role and rules every time (Settings / instructions)
AI Project	A container: instructions + files + ongoing chats for one job family
Workflow brain	Standing brief for one locked process (not the whole company handbook)

Identity rule for today: Extend your Work Assistant **or** create **one** worker Project for the locked job — not five mystery bots.

Become a Manager of AI Agents · Participant Workbook · Sec 14

Worksheet C — Map your process — Step ③

TASK 2.1 (~10 min) — Map your process

Because: You chose a height on the ladder — now write the floor plan (steps) and tag who does what.

Do: In Teacher chat, send the roadmap **Copy** box with your steps (max 8). Accept or correct ●/●/● tags. Copy the map onto this canvas.

Done when: Map exists in Teacher chat + on this page. Mark roadmap **2.1** complete.

Map the process. Messy is fine. Rows 1–4 show a starter path — replace with yours.

Process name: e.g. Weekly team update _____

#	Step	Who / what does it	● Green · ● Blue · ● Red
1	Trigger: Friday Sheet row / pasted bullets	Form / Sheet / me	●
2	AI drafts update from bullets	Work Assistant / workflow brain	●
3	Draft lands in Google Doc / email draft	Doc / Gmail	●
4	Manager checks numbers & tone, then sends	You	●
5			
6			
7			
8			

Key: ● Green = AI thinking · ● Blue = rules / automation · ● Red = human only

Draw the flow (boxes and arrows)

Trigger

→

→

→

Human approval

(Redraw freely)

Still requires a human: e.g. Final send + any number that affects decisions _____

ETCSLV — Onboarding a new employee (and an AI helper on a desk process)

Use this page **after Worksheet C** (map) and **before Worksheet D** (ETCSLV draft).

Say the picture first: before you open a new role, you decide how hard the work is, which systems they touch, what they must always know, what files stay, what they may never do alone, and how you check quality.

Letter	Name	Core question	New-employee analogy
E	Execution	Multiple reasoning steps or loops?	Is this a multi-step desk job or a one-line reply?
T	Tools	Which systems must they touch?	Email, Docs, Sheet, CRM, Forms...
C	Context	What must they always know?	Team goals, tone, forbidden claims
S	State	What must persist beyond one chat?	Last week's file, client prefs, ticket ID
L	Limits	What may they never do alone?	No send, no salary figures, no legal promises
V	Validation	How do we know it's correct?	Checklist, sample check, manager sign-off

Filled example — Weekly team / stakeholder update (common corporate)

	Example answer
E	Yes — gather bullets, rewrite, adjust tone
T	Email + Doc; optional input Sheet
C	Audience (boss / client), priorities, forbidden claims, brand tone
S	Last week's update file; known preferences
L	No send without manager approval; no invented metrics or headcount
V	Facts cited / source noted; tone OK; human signed off

Callout

Harness = the same ETCSLV checklist, named for shipping. You will reuse it in Session 3 (Worksheet E).

Become a Manager of AI Agents · Participant Workbook · Sec 16

Worksheet D — ETCSLV draft — Step ④

Fill this **after** the ETCSLV Framework page (Sec 16).

 **TASK 2.2 (~5 min) — First ETCSLV draft**

Because: The map shows steps — now write the desk rules (especially Limits and Validation).

Do: Fill E–T–C–S–L–V below in your own words. **Paper only — no Teacher chat.** Critique is Task 2.3.

Done when: Draft written on this page. Mark roadmap **2.2** complete.

 **TASK 2.3 (~10 min) — Teacher critiques ETCSLV**

Because: First drafts of L/V are usually soft (“be careful”) — tighten until Monday-testable.

Do: Paste your E–V from this page into Teacher chat. Send the roadmap **Copy** box. Reply with updated **L** and **V** only.

Done when: Updated L + V are specific/testable. Mark roadmap **2.3** complete.

Starters below match a “weekly update” job — rewrite for your process. Be specific on L and V.

Letter	My answer for today’s process
E Execution	e.g. Yes — gather bullets, rewrite, adjust tone
T Tools	e.g. Sheet (inputs) + Doc/email draft
C Context	e.g. Audience = my manager; no invented metrics; friendly-professional
S State	e.g. Last week’s update file; recurring section headings (State = what must still exist next week)
L Limits	e.g. Never send; never invent headcount/revenue; ask if bullets missing (not just “be careful”)
V Validation	e.g. Checklist: every number has a Sheet source · I sign off before send

After Teacher critique — updated L & V (must be specific)

| L (revised) | |
| V (revised) | |

Hardest letter for me: often S, L, or V _____ because _____

Decision Tree — Find the simplest help — Step ⑤

TASK 2.4 (~15 min) — Decision tree + lock pattern

Because: Map + rules exist — triage picks **one** pattern room (don't collect options).

Do: Complete the Decision Tree on the **roadmap** (link on the task). Note the result. Send the roadmap **Copy** box to Teacher. Lock **one** pattern — do not collect options.

Done when: Pattern locked. Mark roadmap **2.4** complete.

Clinic triage: a few questions → the right room, not the whole hospital.

- When this job is finished, what do you have?**
 - ☐ One message, doc, image, or answer → go to Q2
 - ☐ Several steps until a sheet / inbox / status updates → go to Q3
- Does AI need company files?**
 - ☐ No — I can paste in chat → **Type 1 · Quick helper**
 - ☐ Yes — PDFs / sheets / scans → **Type 2 · Company brain**
- How should multi-step work run?**
 - ☐ I approve each step → **Type 3 · Work buddy**
 - ☐ Many similar items overnight → **Type 6 · Batch**
 - ☐ Two different roles hand off → **Type 5 · Handoff**

My result

Type # and name	e.g. Type 3 · Work buddy
I will build today	e.g. Sheet bullets → AI draft Doc → I approve before email
Simpler than I expected?	☐ Yes ☐ No

Type cards (short)

Type	One-line meaning	Monday 15-min action
1 Quick helper	One good output; you check; send/save	Paste draft + 3 rules; one improved version
2 Company brain	Answers from your files + citations	Upload 3–5 PDFs; ask; verify one citation
3 Work buddy	Multi-step; you approve each sensitive step	Gather → AI draft → you approve → paste/send
4 Coding helper	Ship/fix with tests as “done”	AI for PR text; code still through tests
5 Handoff	Two specialist roles; structured packet	Role A sources → Role B writes from packet only
6 Batch	Many similar items; morning sample-check	Trigger on new rows; review sample column
7 Quality checker	Score vs checklist; human decides	Pin rubric; never auto-pass unsure cases

Become a Manager of AI Agents · Participant Workbook · Sec 18

 **TASK 2.5 (~30 min) — Build the workflow brain — Step ⑥**

Because: Pattern is locked — write the **standing brief** for the AI step (Settings once). Still chatbot/NotebookLM here — not n8n yet.

Do: Send the roadmap **Copy** box to Teacher → paste **only** the system instructions into Settings for this job **once** (extend Work Assistant or one new Project; NotebookLM OK if file-heavy). Test a good example and a messy example.

Done when: Brain tested. Mark roadmap **2.5** complete.

Make it run — Track A or Track B — Step ⑦

In plain words: Automation means the path can **start without you remembering**. Day one stays humble: one trigger, one AI step, one output, one approval.

	Track A — preferred	Track B — if automation is blocked
What	Clone facilitator’s n8n / Make / Zapier template	Semi-auto: checklist or form → AI draft in chat → you paste/send after review
When	Wi-Fi + tool access OK	Corporate laptop blocks automation, or IT forbids
Still must	Live-run once on screen	Live-run once on screen (show the draft + where you’d send it)
Not enough	Architecture diagram only	Notes-only with no live AI output

 **TASK 2.6 (~30 min) — Automation path that runs**

Because: Brain is tested — open the path once (automation **or** Track B semi-auto).

Do: **Track A:** clone facilitator template → wire your workflow-brain instructions into the AI step → live-run once. **Track B (if blocked):** trigger checklist/form → AI produces the artifact in chat → you show paste/send after approval. **Optional if time:** send the roadmap **Copy** box to Teacher for a short review.

Done when: You can re-trigger (or re-run the Track B path) without the instructor. Mark roadmap **2.6** complete.

My track today: ☐ A (n8n/Make/Zapier) · ☐ B (semi-auto chatbot)

Quick share — Workflow spotlight (5–10 min)

A volunteer (or someone picked at random) explains in ~60 seconds: (1) the locked process, (2) where the **human approval** (●) sits, (3) what AI must **never invent**. Listeners: note one idea to steal for your own L or V.
Idea I heard that I might use: _____

Section 2 — Reflection

1. Did the decision tree push me simpler or more complex?
2. Can I demo trigger → AI → output once? ☐ Yes ☐ Not yet — blocker: _____

Become a Manager of AI Agents · Participant Workbook · Sec 19

SECTION 3 — Work BY AI

Goal: Manage AI like a small team — roles, harness, failure drill, then ship.

 **TASK 3.0 (~5 min) — Manager of agents (framing)**

Do: Follow the instructor. Write one line below: what “manager of agents” means for your process. **No Teacher chat required.**

Done when: Framing heard + one line written. Mark roadmap **3.0** complete.

One line for me: *You manage roles + rules + evaluation; AI does the drafting.*

Tools in Session 3: Teacher chat for **3.1** and **3.4** (required) · **3.2** and **3.6** optional polish · **3.3** only if stuck · **3.5** live demo (no chat).

From helper to workforce

Manager truth: You do not personally write every email, check every cell, and design every slide. You **coordinate specialists**, set standards, and own exceptions. Managing AI is the same:

Model	+	Memory	+	Tools	+	Workflow	+	Evaluation
which		what it		systems		the path		how you
brain		must know		it may		it follows		know it's
you use		/ remember		touch				good enough

AI workers & AI teams

Specialist roles (use only what you need)

Role	Job	Human parallel
Planner	Break work into steps / outline	Team lead planning the day
Researcher	Gather facts from allowed sources	Analyst pulling data
Writer	Draft the customer- or manager-facing text	Communications
Reviewer	Check tone, policy, completeness	Peer review
Evaluator	Score against a rubric / checklist	QA / compliance checker
Human manager	Approves, rejects, escalates	You

Corporate sketch — New joiner onboarding pack: Researcher pulls the day-1 checklist from the approved HR handbook → Writer drafts welcome email + checklist → Reviewer flags any salary/benefit language that was not provided → **HR (you) sends or edits.**

Callout

Minimum roster. Extra agents create coordination cost. Prefer **one running path** over a 16-agent swarm.

Become a Manager of AI Agents · Participant Workbook · Sec 20

Worksheet F — AI Workforce Canvas

 **TASK 3.1 (~15 min) — Design your AI workforce**

Do: In Teacher chat, send the roadmap **Copy** box (3–5 roles max). Let Teacher cut extras. Delete any role you cannot explain in one sentence. Fill this canvas.

Done when: Minimum role list named. Mark roadmap **3.1** complete.

Minimum roster. Starters assume weekly update — cut roles you don’t need.

Field	Your design
Locked process	e.g. Weekly team update
Human manager	e.g. Me
Roles I will use (circle)	Planner · Researcher · Writer · Reviewer · Evaluator · Other: _____
Handoff packet (what passes between roles)	e.g. Bullets + sources → draft text only (no new facts)
Tools per role	e.g. Writer: Claude · Evaluator: checklist in Sheet
Limits (shared)	e.g. No external send; no invented numbers
Validation (shared)	e.g. Every figure has a source row · human approves
Cost note (\$ cheap draft vs \$\$\$ careful review)	e.g. \$ draft · \$\$\$ only for board-facing rewrite

Swimlane sketch

Planner

: *e.g. Outline: wins / risks / asks*

Researcher

: *(optional)* *Pull last week’s file / Sheet totals*

Writer

: *Draft narrative from packet only*

Reviewer

: *Flag tone + any claim without source*

Human

: *Approve / edit / send*

Become a Manager of AI Agents · Participant Workbook · Sec 21

Worksheet E — Harness Card (shipping name for ETCSLV)

TASK 3.2 (~15 min) — Harness Card (shipping name for ETCSLV)

Do: Fill Worksheet E below — all fields, especially **L** and **V**. Harness = same ETCSLV, shipping name. **Optional if time:** paste L + V into Teacher and send the roadmap **Copy** box for critique.

Done when: L and V are clear enough to demo. Mark roadmap **3.2** complete.

Same letters. Now written as job rules for the process that must run.

Middle column = example to steal. Right column = blank lines for your answers.

Field	Example (starter)	Write yours
Workflow name	<i>Friday Team Update Draft</i>	
Owner (human manager)	<i>Me (Ops Lead)</i>	
E How hard / multi-step?	<i>Multi-step: collect → draft → tone pass</i>	
T Tools (+ cheap vs expensive)	<i>\$ Sheet+Doc draft · \$\$\$ only if legal review</i>	
C Always-on context	<i>Audience, forbidden claims, section template</i>	
S What must persist	<i>Last update file + standing Settings</i>	
L Hard limits / approvals	<i>No send; no invented metrics; escalate missing bullets</i>	
V How we validate	<i>Number-source checklist + human sign-off</i>	
Failure test I will try	<i>Submit empty bullets / ask it to invent a %</i>	
Pass / fail rule	<i>Pass only if it asks for missing input and refuses invented %</i>	

Become a Manager of AI Agents · Participant Workbook · Sec 22

Failure Lab

 **TASK 3.3 (~20 min) — Failure lab**

Do: Trigger **two** failures on your running workflow. Fix instructions or the path. Use the roadmap **Copy** box only if stuck.

Done when: Two lines written: What broke → Fix applied. Mark roadmap **3.3** complete.

Analogy: Mystery-shopper / fire drill on your own process — break it on purpose before Monday does.

Attack	Example	What I observed	Fix applied
Missing input	Empty bullets		
Messy / Bangla-English mix	<i>e.g. Half Bangla WhatsApp paste</i>		
Forbidden ask	“Promise a salary / discount we never approved”		
Overconfident draft	Invented metric		
(your own attack)			

What broke (1): _____

Fix applied (1): _____

What broke (2): _____

Fix applied (2): _____

One fix I shipped after Failure Lab: _____

Become a Manager of AI Agents · Participant Workbook · Sec 23

Worksheet G — Capstone (ship the running workflow)

 **TASK 3.4 (~30 min) — Capstone: ship + demo script**

Do: Re-run the happy path twice without the instructor. Confirm trigger · AI · real output place · human approval. Fill the capstone fields and use the roadmap **Copy** box for a 60-second demo script.

Done when: Definition-of-done checklist complete. Mark roadmap **3.4** complete.

 **TASK 3.5 (~20 min) — Demo Day + peer review**

Do: Live-demo trigger → AI → output → human approval. Say: pain → run → who approves → one risk you fixed. Peer notes one strength + one improvement.

Done when: Demo shown + peer row filled. Mark roadmap **3.5** complete.

Definition of done: ☐ Trigger is real ☐ AI step uses standing instructions ☐ Output lands where work lives ☐ Human approval step is visible ☐ I can re-run without the instructor ☐ L and V match what I built

Capstone field	Answer
Demo title (5 words)	e.g. Friday Update Auto-Draft
Trigger	e.g. New row in “Weekly Bullets” Sheet / pasted notes
AI does	e.g. Writes manager update from bullets using Settings rules
Output location	e.g. Google Doc body / Gmail draft
Human must still...	e.g. Check every number and click Send
Biggest risk remaining	e.g. Someone pastes incomplete bullets and still trusts the draft

Demo Day script (60–90 seconds)

- 1. Problem: e.g. Friday scramble from WhatsApp notes _____
- 2. Show trigger: e.g. I add a Sheet row / paste bullets _____
- 3. Show output: e.g. Draft appears in Doc _____
- 4. Show human gate: e.g. I refuse to send until numbers checked _____
- 5. Monday next step: e.g. Run it once with real team bullets _____

Peer review received

Strength	Improvement

Checklist H — AI Delegation Checklist

Before you delegate a task to AI (assistant or workflow):

- Brief:** ☐ Role and outcome clear ☐ Audience and tone set ☐ Forbidden content listed ☐ Output format specified
- Safety:** ☐ No unnecessary PII in the prompt ☐ Red steps marked human-only ☐ Hallucination checks for numbers / policy
- Operate & ship:** ☐ Right tool for this job (≤ 3) ☐ Files attached if required ☐ Validation method named (V) ☐ You own exceptions ☐ Ran once successfully ☐ Failure case tested once

Worksheet I — Personal AI Adoption Plan (seed for 30 days)

 TASK 3.6 (~10 min) — 30-day AI adoption plan

Do: Fill this seed plan and complete the full calendar in **R7 (Sec 29)**. Circle the Week 1 action you will actually do. **Optional if time:** send the roadmap **Copy** box to Teacher for a polish pass.

Done when: Tomorrow + this week filled. Mark roadmap **3.6** complete.

Horizon	Commitment
Tomorrow	e.g. Use Work Assistant on 1 real email before lunch
This week	e.g. Attach 3 SOPs/files; run my workflow once
Next 30 days	e.g. Friday ritual: trigger → draft → approve
I will stop doing...	e.g. Pasting customer/employee PII into public chat
I will measure success by...	e.g. Time to first usable draft under 10 minutes
Accountability buddy	e.g. Desk neighbour / team lead

Section 3 — Reflection

1. As a manager of AI, my most important skill is:
2. One process I will **not** automate yet:

Become a Manager of AI Agents · Participant Workbook · Sec 25

END OF BOOKLET — Reference Cards

Tear-out style pages. Keep using after the workshop.

R1 — Prompt Cheat Sheet

CTAO

Context: I am [role] at [org type] working on [topic].
Task: [verb] [object].
Audience / constraints: [tone, language, length, never invent X].
Output: [format, number of options, sections].

Power add-ons

Need	Add this line
Less invention	"If unknown, say unknown. Do not invent numbers or policy."
Better structure	"Use headings + bullets. Max one page."
Bangla quality	"Natural Bangla, not literal translation. Avoid awkward formalisms."
Critique mode	"List weaknesses first. Then rewrite once."
Use prior context	"Use my process from earlier in this chat. Don't ask me to re-paste unless critical."
Manager gate	"End with: Risks / What a human must check."

Stop → Read → Decide before you paste into email, CRM, or WhatsApp.

R3 — AI Workflow Checklist

- [] One locked process named
- [] Trigger defined
- [] Steps mapped (● / ● / ●)
- [] ETCSLV drafted — L & V specific
- [] Pattern / Type chosen (simplest that works)
- [] Workflow brain in Settings (once)
- [] Happy path tested · Messy path tested
- [] Output location correct
- [] Human approval visible
- [] Owner named for exceptions

Key: ● Green = AI thinking · ● Blue = rules / automation · ● Red = human only

Become a Manager of AI Agents · Participant Workbook · Sec 26

R2 — AI Tool Selection Matrix

If your job needs...	Start with	Also consider	Avoid for this job
Fast draft / rewrite	ChatGPT or Claude	Gemini	Over-tooling
Long policy reading	Claude or ChatGPT (+ file)	NotebookLM	Blind trust without cite
Answers from <i>your</i> SOP pack	NotebookLM / Project files	Claude/ChatGPT Projects	Pure web chat with no upload
Web research + links	Perplexity	Gemini	Treating snippets as audited fact
Slides / visuals	Gemini / Gamma / ChatGPT images	—	Brand compliance without review
Recurring trigger	Zapier / Make / n8n + Doc/Sheet	—	Multi-agent complexity on day 1

Max 2–3 tools for one workflow.

R4 — ETCSLV One-Page Summary

	Question	Onboarding analogy
E Execution	Multi-step reasoning?	How hard is the desk job?
T Tools	Which systems?	Email, Sheet, CRM...
C Context	Always know what?	Product + tone + taboos
S State	What persists?	Last file, ticket ID, prefs
L Limits	Never alone?	No send / no money / no legal
V Validation	Correct how?	Checklist + human sign-off

Harness = ETCSLV with a shipping name for the live process.

R5 — AI Decision Tree (pocket)

Finished output = ONE thing? - Needs company files? — No → Type 1 Quick helper - Yes → Type 2 Company brain MANY steps? - I approve each step → Type 3 Work buddy - Overnight many items → Type 6 Batch - Two specialist roles → Type 5 Handoff Special cases: coding → Type 4 · rubric QA → Type 7

Become a Manager of AI Agents · Participant Workbook · Sec 27

R6 — AI Ethics & Privacy Checklist

Before you paste

- ☐ No full NID / passport / card / salary / medical details unless approved channel
- ☐ No passwords, OTPs, or system credentials
- ☐ No confidential contracts, credit files, or unreleased board packs in personal tool accounts
- ☐ Minimize personal data — mask where possible
- ☐ Respect employer AI / data policy

Before you publish or send

- ☐ No invented policy, legal, or regulatory claims
- ☐ Marketing / employer-brand claims checked
- ☐ Respectful language for staff, candidates, customers, vendors
- ☐ Human accountable name on external messages
- ☐ Sources retained for audit if needed

If unsure: ask compliance / IT / your manager — do not “just try it” with live employee or customer data.

R9 — Glossary (one line each)

Term	Meaning
Generative AI	AI that creates new text/media from prompts
Prompt	Your work brief to the AI
Hallucination	Confident false detail
Human-in-the-loop	Person must approve risky steps
Project / Settings	Standing job brief + files
Knowledge assistant	Answers from your documents
RAG	Find relevant file passages, then answer
Workflow	Trigger → steps → output
Automation	Path starts without you remembering
ETCSLV	Execution, Tools, Context, State, Limits, Validation
Harness	ETCSLV structure to manage agents
Agent (workshop sense)	AI following a routed process with rules

Become a Manager of AI Agents · Participant Workbook · Sec 28

R7 — 30-Day Personal AI Adoption Plan

Theme for 30 days: e.g. “One Friday workflow I can re-run without thinking” _____

Week	Focus	Concrete actions	Done
Week 1	WITH — daily helper	Use Work Assistant on 3 real tasks; CTAO prompts; Stop→Read→Decide	☐
Week 2	Memory & tools	Attach 3 key files; cut tool stack to ≤3; one NotebookLM or Project brain	☐
Week 3	THROUGH — one workflow	Map steps; ETCSLV; run trigger→AI→output once per week	☐
Week 4	BY — manage	Failure drill; peer review; decide keep / kill / improve	☐

Cadence

Ritual	When	Notes
15-min AI practice	☐ Daily ☐ 3× week	
Weekly workflow run	Day: __	
Review L & V	Every Friday	
Share one win	With: __	

Metrics (pick 2)

- ☐ Hours saved on _____
- ☐ Cycle time for _____
- ☐ Error / rewrite rate down
- ☐ Team adoption (people using the assistant): _____

Month-end decision

Keep	Improve	Stop

Signature (optional commitment)

I will treat AI as staff I manage — briefed, limited, and reviewed.

Name: __ **Date:** __

Become a Manager of AI Agents · Participant Workbook · Sec 29

R8 — Corporate office scenario bank (inspiration only)

Pick a row close to your job. Banking/finance people can still use the Finance / Credit row.

Domain	WITH AI (help at your desk)	THROUGH AI (path that runs)	Human approval
HR / Admin	Offer / joining letter from template + sheet row	Form → onboarding checklist Doc → HR queue	HR verifies compensation & dates
Team lead / Manager	Weekly update from Slack/WhatsApp notes	Friday Sheet bullets → manager email draft	You send after number check
Operations	Meeting notes → owners + deadlines	Shared inbox / Form → tagged queue + draft reply	Ops owner sends / assigns
Customer / vendor support	Rewrite angry email calmly	Ticket → SOP draft reply	Agent sends
Marketing / Comms	3 caption options; slide outline from brief	Brief → draft pack → brand review folder	Brand / compliance approves
Sales / BD	Visit notes → polite follow-up	Lead Form → welcome pack draft → CRM note	RM / AE personalizes & sends
Analyst / Strategy	“What changed vs last month?” from export	Dirty CSV → cleaned table → insight bullets	Analyst owns the numbers
Finance / Accounts	Narrative for P&L bullets; vendor chase email	Receipt photos / Sheet → exception list	Finance lead confirms totals
Learning / L&D · IT	Lesson plan from PDF; access FAQ from SOP	Ticket form → category + first reply draft	Facilitator / IT agent owns edge cases
Finance institutions	Document chase; product FAQ draft	Inquiry Form → checklist Doc → RM queue	RM sends; credit decision stays human

Everyday Bangladesh workplace patterns (any industry)

Familiar pattern	How AI helps	Still human
Office WhatsApp chaos → Monday plan	Clean action list by owner	You assign & chase
Vendor / procurement follow-ups	Polite reminder drafts	Commercial terms stay yours
New employee first-week confusion	Handbook Q&A with citations	HR owns exceptions
Leadership Friday review	Slide outline + speaker notes	Leaders own the story
Shared mailbox overload	Tag + draft; batch overnight	Spot-check sample before trust

Become a Manager of AI Agents · Participant Workbook · Sec 30

Day Roadmap — How every piece connects

One page. Same job all day. Escalate — don't restart.

OPEN 0.0–0.4 Hire coach + name roles + lock ONE job	WITH AI 1.1–1.6 Hire helper + lock ONE job	THROUGH AI 2.0–2.6 Make the JOB run on a clear path	BY AI 3.0–3.6 Manage the team + ship + demo
Stage	You learn	You build	Why the next step exists
0 Open	What AI is · chat vs assistant vs agent	Teacher Project (Settings once) + kickoff chat	You need a coach before you hire a worker
1 WITH	Brief · feedback once · lock one job · tools ≤3 · memory	Work Assistant + locked process (1.4)	You must feel AI at your elbow <i>and</i> commit one job before automating
2 THROUGH	Map ●●●● · ETCSLV · pattern · brain · run	Trigger → AI → output → human approval	The locked job becomes a path that runs , not a blank chat every time
3 BY	Roles · harness (= ETCSLV for shipping) · failure · demo	Minimum AI roster + re-runnable capstone	Managers don't do every draft — they set roles, limits, and quality

Task chain at a glance

	Tasks	Connection
	0.0→0.4	Orient → open desk → hire Teacher → contract → name chat/assistant/agent
	1.1→1.6	Brief → hire Work Assistant → feedback once → lock job → tools → memory <i>for that job</i>
	2.0→2.6	How tall? → map → draft E-V → critique → pick pattern → brain → run once
	3.0→3.6	Manager mindset → roster → harness → break it → ship → demo → 30-day plan

Remember: Product of the day = one **running** workflow for the process you locked at **1.4**. Notes alone are not enough.

Notes

[illegible]

Become a Manager of AI Agents · Participant Workbook · Sec 32

Parking lot (questions for instructor / IT / compliance)

Wins to tell my team on Monday

1.

2.

3.

Closing reminder

Work WITH AI → brief clearly, review always

Work THROUGH AI → one path that runs

Work BY AI → roles + limits + evaluation

You are the manager.

AI is the workforce.

Final approval is still yours.

Thank you for investing a day in building your personal AI workforce.

Participant Workbook · Become a Manager of AI Agents · Build Your Personal AI Workforce
