

Become a Manager of AI Agents

Build Your Personal AI Workforce

One-day instructor-led workshop · Participant Workbook

Participant name	_____
Organization / team	_____
Role	_____
Date	_____
City	_____

How to use this book

This is a **workshop companion**, not a textbook. Listen to the instructor. Use these pages to capture ideas, complete exercises, and take home a plan you can use on later. Write in the blanks. Leave pages messy. The value is in *your* notes, not the printed text.

Where you see *italic starters* or an “e.g.” — those are **examples to steal and adapt**, not the “right answer.” Cross them out and write your real work.

Roadmap = instructions. Each task’s **Copy** box lives on the roadmap website. This book is for writing, worksheets, and notes — not a second prompt dump.

Finding a page: Use the **page number at the bottom center** (same as the PDF viewer). Headers say **Sec XX** for the chapter — search **Task 1.5** if a section spans several sheets.

The story of the day

Work WITH AI	→	Work THROUGH AI	→	Work BY AI
↓		↓		↓
AI helps YOU at your job		AI runs THE JOB on a clear path		YOU manage AI like a small team

Stage	Plain meaning	Workplace example
WITH	AI sits next to you and helps	A capable junior at your desk
THROUGH	AI helps run a recurring process	Reception → desk → approval
BY	You coordinate specialist AI roles	You are the manager; AI does the drafting

Product of the day: One real work process that can run like this:

Trigger → AI step → Output where work lives → Human approval for anything risky

Day map (fill as you go)

Block	Focus	Time (approx.)	Tasks	My status
Opening	What AI is · expectations · Teacher Agent	~35 min	0.0–0.4	☐
Session 1	Work WITH AI	~90 min	1.1–1.6	☐
Break		15 min		☐
Session 2	Work THROUGH AI	~105 min	2.0–2.6	☐
Lunch / break				☐
Session 3	Work BY AI · Demo Day · 30-day plan	~115 min	3.0–3.6	☐

My painful process for today (one sentence):

<i>Starter:</i> “Every Friday I scramble WhatsApp notes into a manager update and numbers go wrong.”

What “done” looks like:

e.g. “Friday 4pm: one approved email draft in Gmail, numbers checked, ready to send.”
--

Contents — Page Guide

Use this map during the workshop. Instructors may say “open **Sec 12**” or “Task **1.1**.”

Page numbers: The number at the **bottom center** of each PDF sheet is the real page (matches your PDF viewer). **Sec XX** in the header is the *section label* — one section can span more than one sheet.

Task serial matches the roadmap website and agenda slides: **0.0→0.4 · 1.1→1.6** (lock → tools → memory) · **2.0→2.6 · 3.0→3.6**.

SESSION 0 — Housekeeping + Opening

Goal: Shared language + one Teacher Agent you will use all day.

1.1 What is AI?

TASK 0.0 (~5 min) — What is AI? What to expect / not expect

Do: Follow the instructor. On this page (or a note), write one line you **expect** today and one you will **not** expect.

Done when: Both lines written. Mark roadmap **0.0** complete.

In plain words:

AI is software that can learn patterns from large amounts of data and then produce useful outputs — text, summaries, suggestions, classifications - without you writing every rule by hand.

Analogy:

Think of a **very fast new junior** who has read a huge library of books, reports, and internet pages. They draft quickly and "**sound confident**". They still invent details when unsure. They need a manager who briefs them, checks the work, and decides what leaves the room.

Corporate office examples:

- **HR:** Draft a first reply to a candidate asking about interview timing - you still confirm the real schedule.
- **Operations:** Turn a messy WhatsApp thread into a clean action list - you still assign owners.
- **Marketing:** Rewrite a product post in clearer Bangla - brand/compliance still approves before publish.
- **Finance:** Draft a customer note about missing loan documents - checklist still get a human check.

What AI is good at today

Strong	Weak / risky
Drafting and rewriting	Final hiring, legal, budget, or credit decisions
Summarizing long text	Inventing "facts" when sources are missing
Turning rough notes into structure	Knowing your latest internal policy unless you provide it
Brainstorming options	Sending emails, publishing, or approving alone

Callout — Manager mindset

You do not need to "become a programmer." You need to become a **clear brief-giver and quality checker**.

Reflection

1. Where in your week do you already act like a manager of juniors (brief → review → approve)?

2. What would you *never* let a junior send without your check?

My notes

Become a Manager of AI Agents · Participant Workbook · Sec 04

1.2 What is Generative AI?

In plain words:

Generative AI creates *new* content from a prompt - emails, reports, Bangla/English rewrites, slide outlines, image ideas - instead of only retrieving a fixed answer from a database.

Everyday analogy:

Traditional software is like a **fixed menu at a canteen**: press button → get the same dish.

Generative AI is like a **skilled cook**: give ingredients and instructions → get a new plate each time. Taste before you serve.

Office examples

Role	Generative AI can help with...
HR / Admin	Offer letter, joining checklist, leave-policy FAQ from uploaded handbook
Operations	Meeting notes → owners + deadlines; SOP Q&A for new joiners
Marketing / Comms	Three caption options; rewrite press note; slide outline from brief
Sales / BD	Visit notes → polite WhatsApp/email follow-up; proposal outline
Analyst / Strategy	Clean a messy Excel narrative; “what changed vs last month?” bullets
Team lead / Manager	Weekly update from scattered Slack/WhatsApp notes
Finance / Credit ops	Document investment memo draft; policy summary (you verify numbers)

Hands-on box — Try once later today

Step	Do this
1	Paste 5 rough bullets about your week
2	Ask AI: “Turn these into a 6-line manager update. No invented numbers.”
3	Cross out anything that feels wrong

My sample output (paste or write key lines):

1.3 AI vs Traditional Software

	Traditional software	Generative AI
How it works	Fixed rules and forms	Predicts likely next words / patterns
Same input	Same output every time	Similar but not identical
Best for	Calculations, records, workflows that must not invent	Drafting, summarizing, exploring options
Risk	Wrong rule → wrong result (usually consistent)	Confident wrong answer (“hallucination”)
Your job	Configure and operate	Brief, constrain, and review

Corporate example:

- **HRIS / payroll / ERP / CRM** = traditional software (leave balances, invoice totals, order status).
- **Drafting a weekly team update** from messy notes = generative AI.
Do not mix them up: AI should not “invent” a leave balance or invoice total. The system of record should.

Callout

Use traditional software for **truth that must not drift**. Use generative AI for **language, structure, and first drafts**.

When would you use which? (circle one per row)

Task	System of record	Generative AI	Both + human
Check leave balance or payroll total	☐	☐	☐
Write a polite follow-up email to a vendor	☐	☐	☐
Decide final hiring / budget / credit approval	☐	☐	☐
Summarize 20-page policy for new-joiner training	☐	☐	☐

Become a Manager of AI Agents · Participant Workbook · Sec 06

1.4 Chatbots vs AI Assistants vs AI Agents

Workplace analogy (remember this):

Type	Picture	What it means
Chatbot / chat	Hallway question to whoever is free	One-off Q&A; little standing brief
AI Assistant	Hired desk assistant with a joining letter	Project/Settings = standing role; you still drive
AI Agent / workflow	Routed office process: intake → desk → approval	Steps, tools, and rules; human still approves high risk

Chat	→	"Help me rewrite this email."
Assistant	→	"You are my Work Assistant for weekly reporting. Always ask if numbers are missing."
Agent path	→	Form arrives → AI drafts → Sheet updates → Manager approves before send

Corporate office examples

Situation	Best fit
Quick rephrase of a Slack message to your boss	Chat
Standing helper for your weekly team / client update	Assistant (Project)
New Google Form → draft onboarding pack → queue for HR review	Agent / workflow
Ticket / email → SOP-based draft reply → agent sends after check	Agent / workflow

Become a Manager of AI Agents · Participant Workbook · Sec 07

Opening tasks (Session 0)

TASK 0.1 (~5 min) — Open your tools

Do: Open this **roadmap** · ChatGPT or Claude (ready for a Project). Optional: blank note for scratch. Copy boxes for later tasks live on the roadmap.

Done when: Roadmap + AI tool open. Mark roadmap **0.1** complete.

TASK 0.2 (~10 min) — Create Teacher Agent

Do: Create Project Workshop Teacher – Agentic AI → open **Settings** (not chat) → paste the roadmap **Copy** box once → Save.

Done when: Settings saved. Mark roadmap **0.2** complete.

TASK 0.3 (~10 min) — Kickoff chat with Teacher

Do: In Teacher **Chat** (same thread all day), send the roadmap **Copy** box (role, org, painful process). Answer Teacher's 3 questions in the **same** chat.

Done when: Teacher has your process right. Mark roadmap **0.3** complete.

TASK 0.4 (~5 min) — Chat vs assistant vs agent

Do: In the **same Teacher chat**, send the roadmap **Copy** box. Write one sentence you will remember in the checkpoint below.

Done when: One remember-sentence written. Mark roadmap **0.4** complete.

Checkpoint — Write one sentence you will remember

1.5 Prompt Engineering (clear instructions)

In plain words:

A prompt is a work brief. Better briefs → better first drafts. You still review.

Simple prompt recipe (CTAO)

Letter	Meaning	Example
C	Context	"I am an Operations Lead at a corporate office in Dhaka."
T	Task	"Draft a follow-up email after yesterday's vendor meeting."
A	Audience / constraints	"Polite, under 120 words, no new commercial promises."
O	Output format	"3 options. Label A/B/C."

Weak vs stronger

Weak	Stronger
"Write email about documents."	"Role: HR BP. Task: soft reminder that NID copy and signed offer letter are still pending. Tone: respectful. Language: Bangla or English. Max 120 words. Do not invent a deadline. Output: one email body only."

Exercise — Rewrite your weak prompt

Starter if stuck — then write your own:

Weak	Stronger (CTAO)
"Make this email better."	"Context: Ops lead, Dhaka office. Task: rewrite this vendor follow-up. Audience: polite, under 100 words, no new price promises. Output: 2 options A/B + 3 risks I should check."

My weak prompt:

My stronger prompt (use CTAO):

After AI replies — Stop → Read → Decide

Check	Yes / No
Facts match what I know?	☐ / ☐
Tone safe for customer / boss?	☐ / ☐
Anything invented?	☐ / ☐

Check	Yes / No
Ready to send as-is?	☐ / ☐

Become a Manager of AI Agents · Participant Workbook · Sec 09

1.8 Hallucination

In plain words:

Hallucination is when AI invents details that sound right but are not true — fake citations, wrong numbers, made-up clause numbers, imaginary employee or customer facts.

Analogy:

A confident junior filling gaps in a board pack so it “looks complete.” Dangerous in any office where numbers and promises matter.

High-risk zones in corporate offices

- Headcount, salary, bonus, or budget figures
- Legal, HR, or compliance wording (“policy says...”) without a source
- Customer or employee PII (NID, phone, salary, medical)
- Marketing claims and competitor comparisons
- Promises to clients, vendors, or candidates (“we will confirm by Friday”)
- Finance-specific: rates, fees, EMI, regulatory language

Detection habits

1. Ask: “Cite the source or say unknown.”
2. Spot-check numbers against the system of record.
3. Never paste secrets you should not share with a vendor tool.
4. Prefer “draft + checklist” over “final answer.”

Trap exercise (instructor may demo)

Ask AI a question about a policy you *did not* upload. Note whether it invents.

What happened?

Become a Manager of AI Agents · Participant Workbook · Sec 10

1.9 Human-in-the-loop

In plain words:

A human must approve steps that affect customers, money, legal/compliance, people decisions, or public reputation.

Red / Blue / Green (kitchen tags)

Tag	Meaning	Examples
● Green	AI thinking OK	Draft, summarize, rewrite, brainstorm
● Blue	Rules / automation OK	Forms, reminders, moving data, triggers
● Red	Human only	Hiring, legal, conflict, budget/credit decision, send externally without review

You will reuse these tags when you map your process (Worksheet B sketch · Workflow Canvas). Same meanings every time.

Always human before...

- ☐ External email / SMS / WhatsApp to customer, vendor, or candidate
- ☐ Changing official records (HRIS, ERP, CRM)
- ☐ Publishing marketing / social posts
- ☐ HR letters with compensation or termination language
- ☐ Hiring, budget, legal, credit, or compliance decisions

My personal red lines

e.g. (1) Any email leaving the company (2) Numbers in a board/manager pack (3) HR letters with pay or exit language

1. _____
2. _____
3. _____

Become a Manager of AI Agents · Participant Workbook · Sec 11

SECTION 1 — Work WITH AI

Goal: Use AI as a daily helper — clear instructions, the right tool, and human judgment.

Session 1 task order: 1.1 → 1.2 → 1.3 → 1.4 → 1.5 → 1.6 (lock the job before tools).

Worksheet A — Work Assistant Brief

TASK 1.1 (~5 min) — Fill your Work Assistant brief

Do: Complete the brief below first (paper/this page — **no AI yet**). Keep it short enough that a stranger could follow it.

Done when: Brief filled. Mark roadmap 1.1 complete.

TASK 1.2 (~20 min) — Create Work Assistant + three real runs

Do: New Project My Work Assistant — [Your Name] → paste your brief into **Settings** (add “Never invent meetings, names, or deadlines” if missing) → run the **three** prompts from the roadmap **Copy** boxes in that chat. Read each answer before the next.

Done when: Three runs done. Mark roadmap 1.2 complete.

TASK 1.3 (~15 min) — One feedback round (Teacher ↔ Work Assistant once)

Do: In Teacher chat, send the roadmap **Copy** box (brief + weak prompt + one reply). Keep fixes you agree with → update Work Assistant **Settings** once → re-run **one** task.

Done when: Settings updated + one re-run compared. Mark roadmap 1.3 complete.

Think first. Fill this before you “hire” your assistant in the AI tool.

Italic starters are examples — cross them out and write yours.

Field	Your answer
Role title	Executive Assistant for e.g. <i>Operations Lead</i> — <i>weekly reporting & vendor follow-ups</i> _____
Top 3 priorities	1. e.g. <i>Turn rough notes into clear updates</i> 2. e.g. <i>Draft polite follow-ups</i> 3. e.g. <i>Flag missing numbers</i> _____
Tone	☐ Formal ☐ Friendly-professional ☐ Concise bullets ☐ Bangla-first ☐ English-first
Always ask me before...	e.g. <i>Sending externally</i> · <i>inventing a deadline</i> · <i>using any figure I did not provide</i> _____
Never invent...	e.g. <i>Metrics, headcount, prices, policy clauses, people's names not in my notes</i> _____

Field	Your answer
Output style	e.g. Short bullets first, then optional full draft; end with “Human must check:” _____
Success looks like	e.g. I can paste 5 messy bullets and get a usable draft in under 2 minutes _____

Three real tasks I will run today with this Work Assistant

Ideas: rewrite one real email · clean one meeting note into actions · draft one weekly update from bullets

#	Task	Done?
1		☐
2		☐
3		☐

Feedback notes (after Teacher critiques once)

What I changed in Settings:
e.g. Added “never invent numbers” + “ask if bullets missing”

Become a Manager of AI Agents · Participant Workbook · Sec 12

Worksheet B — Lock today's process

TASK 1.4 (~10 min) — Lock today's process

Do: On paper (3 min): name · pain · done today · what stays human. Then send the roadmap **Copy** box in Teacher chat. If Teacher says too big, take the smaller slice. Do **not** pick tools yet.

Done when: Process locked for the rest of the day. Mark roadmap **1.4** complete.

Next: tools (1.5) → memory (1.6) for *this* job. **Session 2** will turn **this same locked process** into a path that can run (map → rules → automate).

*One recurring job for the rest of the day — not the whole company.
If you feel stuck, steal the starter column, then rewrite for your real job.*

	Starter (steal & adapt)	Write yours
Process name	Weekly team update from Friday bullets	
Who starts it?	Me — I paste bullets / fill a Sheet row	
Who receives the output?	My manager (email draft)	
How often?	Weekly	Daily / Weekly / Monthly / Ad hoc
Pain today	Last-minute scramble; numbers sometimes wrong	
Smallest useful slice for <i>this</i> workshop	Bullets → draft update → I approve before send (<i>not</i> “automate all reporting”)	

Green / Blue / Red first sketch (optional — refine in Session 2)

Step (rough)	 /  / 
Collect bullet points or requirements from team	 or you
AI drafts the update	
I check numbers & send	

Key:  Green = AI thinking (draft, summarize, rewrite) ·  Blue = rules / automation (forms, reminders, moving data) ·  Red = human only (send externally, money, hiring, legal)

Become a Manager of AI Agents · Participant Workbook · Sec 13

1.10 Choosing the right AI tool

TASK 1.5 (~30 min) — Tool landscape + fit (max 2–3) for the locked process

Do: Watch the short tool tour. With your locked process from 1.4, send the roadmap **Copy** box to Teacher. Run **one** identical test only in the recommended tools (max 3). Write today's stack below.

Done when: Stack written (max 3). Mark roadmap 1.5 complete.

Rule of the day: Lock **one job** first. Then pick **≤3 tools** for that job. Do not open every shop in the market.

Five lanes (A–E) — jobs, not brands

Lane	Need	Example tools (illustrative)
A Think & draft	Daily writing / Work Assistant	ChatGPT, Claude
B Research web	Public news + citations	Perplexity, Gemini
C Your files	Policy / SOP Q&A from <i>your</i> docs	NotebookLM, Projects with uploads
D See / hear / show	Decks, images, voice, screenshots	Gemini, Gamma, ChatGPT images, etc.
E Connect & run	Trigger → AI → Doc/Sheet	Zapier / Make / n8n (+ Forms/Sheets)

Same A–E letters appear in the tool snapshots below. Use them in the matching exercise.

Fit questions

1. Do I need one finished draft — or many steps?
2. Must the answer come from **company files**?
3. Will a human approve each sensitive step?

My stack for today's locked process (max 3)

Starter stack many people use today: ChatGPT or Claude (Work Assistant) · NotebookLM or Project files (SOPs) · Google Form/Sheet (trigger). Keep only what *your* job needs.

#	Tool	Why this job needs it
1	<i>e.g. Claude / ChatGPT</i>	<i>Standing Work Assistant + drafts</i>
2	<i>e.g. NotebookLM</i>	<i>Answers from our handbook PDF</i>
3	<i>e.g. Google Form → Sheet</i>	<i>Trigger / inputs</i>

1.11 Tool snapshots — learn the *job*, not the brand

Disclaimer — tools change fast

Names on this page are **examples for today**. In **6–12 months**, a different product may be more popular or better. Do **not** cling to brands. Learn the **core job** each type of tool does, then pick whatever your company allows that fits *this* process.

How to read any AI tool (the durable part)

Core job	What it does for you	Ask before you buy in
Think & draft	Writes, rewrites, critiques, plans	Standing brief / Projects? Privacy OK?
Research the open web	Finds current public info + links	Can I open and verify citations?
Answer from <i>my</i> files	Uses your PDFs/SOPs, not only internet memory	Are my files allowed in this tool?
See / hear / show (multimodal)	Images, voice, slides, screenshots	Is the output good enough to review?
Connect & run	Trigger → AI → Doc/Sheet/email draft	Human approval before send?

A. Text & reasoning (daily desk)

Example (today)	Core strength	Good for...	Watch-outs
ChatGPT	Flexible all-rounder; Projects; can also do images/voice on many plans	Work Assistant, drafts, light analysis	Plan limits; check facts; privacy
Claude	Careful writing; strong with long documents	Policies, reports, coaching critique	Verify numbers; privacy
Gemini	Strong if you live in Google Docs/Drive	Docs-linked work, multimodal assist	Confirm where data is stored

Way of work: One standing Project/instructions = your Work Assistant. Chat without a brief = hallway question only.

B. Research with sources

Example (today)	Core strength	Good for...	Watch-outs
Perplexity	Answers with web citations	“What’s current?” market / news scans	Links can still be wrong — open them
Gemini (web mode)	Research + Google ecosystem	Quick public lookup beside Docs	Same: verify before you trust

Way of work: Use for **public** questions. Not a substitute for your internal policy binder.

C. Knowledge from *your* documents

Example (today)	Core strength	Good for...	Watch-outs
NotebookLM	Grounded in files <i>you</i> upload; citations	SOP / handbook / policy Q&A	Only as good as the files you give it
ChatGPT / Claude Projects (with uploads)	Brief + files in one place	Recurring job that needs company context	Don't upload secrets your IT forbids

Way of work: Upload → ask → **click the citation** → verify. If the file is missing, “I don't know” is success.

D. Multimodal (top types — not a catalog)

Type	Core job	Example (today)	Good for...	Watch-outs
Image	Create or edit visuals	ChatGPT / Gemini image features	Rough creatives, diagrams, mockups	Brand/legal review before publish
Voice / meeting	Speech → notes or talk-to-AI	Built-in voice in ChatGPT/Gemini; meeting notetakers your org allows	Visit notes, action lists	Confirm speakers/facts; privacy on recordings
Slides / docs layout	Turn bullets into a deck or polished doc	Gemini + Google Slides; Gamma (or similar)	First-pass presentation structure	You still own the story and numbers
Screenshot / file “see this”	Read what's on screen or in a photo	Multimodal chat (ChatGPT, Claude, Gemini)	Extract text from a form photo; explain a UI	Blur PII; don't photograph confidential screens carelessly

Way of work: Multimodal speeds a **first draft**. Human still tastes before it leaves the kitchen.

E. Connect & run (light automation)

Example (today)	Core strength	Good for...	Watch-outs
Zapier / Make / n8n + Forms/Sheets	Trigger starts the path without you remembering	Form → AI draft → Doc/Sheet	Keep day-one automation humble; human before send

Way of work: Trigger → AI → output location → **approval**. Fancy multi-agent setups wait until one path already runs.

Manager rule: Lock the **job** → name the **core jobs** you need (**A–E**) → pick ≤3 tools that do those jobs → ignore the hype list.

Callout — Privacy

Do not paste employee/customer NID, salaries, passwords, medical details, or confidential contracts into public tools unless your organization has approved that use.

Exercise — Match the *job type* (then name a tool)

A–E key (use these letters):

A Think & draft · **B** Research web · **C** Your files · **D** See / hear / show · **E** Connect & run

Think lane first (write A, B, C, D, or E), then write any tool that fits today.

Job	Core job (A–E)	Tool you would try
Summarize our leave policy PDF with page refs	—	—
Rewrite angry customer/vendor email, polite Bangla	—	—
Find recent public news on our industry / competitors	—	—
Standing weekly Work Assistant for your team update	—	—
Turn bullets into a first-pass slide outline	—	—
Form submit → draft lands in a Doc for my review	—	—

Become a Manager of AI Agents · Participant Workbook · Sec 14

1.6 Context

In plain words:

Context is everything AI needs *in this conversation* to do the job — role, product, audience, constraints, and the actual content (notes, policy excerpt, table).

Analogy:

Briefing a new hire *before* they write a customer letter: who the customer is, what product, what you may / may not promise.

Without context: AI guesses from the public internet.

With context: AI works from *your* brief.

Mini checklist — Did I give enough context?

- ☐ Who I am / my role
- ☐ Who the audience is
- ☐ The raw material (paste notes / excerpt)
- ☐ What “good” looks like
- ☐ What is forbidden

My notes

1.7 Memory

TASK 1.6 (~10 min) — Memory — docs + grounded questions for the locked process

Do: Upload 1–2 allowed work docs for your locked process (NotebookLM or Project files). Ask two questions the docs can answer. Ask one trap question that is **not** in the docs — did it refuse or invent?

Done when: You verified one citation and saw the trap fail safely. Mark roadmap **1.6** complete.

Order: Do this **after** Task **1.4** (lock) and **1.5** (tools).

In plain words:

Memory is what sticks beyond one message — Project instructions, uploaded files, past chat in the same thread, or saved preferences.

Kind of memory	Workplace picture	Example
Instructions / Settings	Joining letter / handbook	“Never invent numbers or policy clauses.”

Kind of memory	Workplace picture	Example
Files	Company file on the desk	Policy PDF, product FAQ, SOP
Chat history	Ongoing conversation at the desk	“Use my process from earlier.”
Your brain	Manager judgment	You still know what is true today

Callout — Grounding

Give the junior the **company file**, not corridor rumors. If the file is missing, good AI should say “I don’t know” — not invent policy.

Exercise — What should my Work Assistant always remember?

Always know	Never invent
e.g. My role, Bangla/English preference, weekly update format	e.g. Headcount, salary, revenue, deadlines I did not give

Section 1 — Reflection

1. What changed in how I brief AI after this morning?
2. Which habit will I keep: better prompts, memory/files, or human-in-the-loop?
3. What am I still unsure about?

Extra notes – Section 1

SECTION 2 — Work THROUGH AI

Goal: Turn one messy process into a reusable path — map, rules, pattern, and a run that works once.

Bridge from Session 1

In **Task 1.4** you locked **one** recurring job. Session 1 = AI helped *you*. Session 2 = that **same job** becomes a **path that can run** (not a blank chat every time).

My locked process from Task 1.4:

Session 2 spine (why this order — follow top → bottom)

① Picture the destination	Anatomy: Trigger → AI → Output → Human approval
② How tall is the build?	Pattern ladder (Task 2.0)
③ What happens on the floor?	Map steps + ● Blue thinking / ● rules / ● human (Task 2.1)
④ Learn ETCSLV → write it	Framework page → Worksheet D (Tasks 2.2–2.3)
⑤ Pick the room	Decision tree → lock one pattern (Task 2.4)
⑥ Hire the standing brief	Workflow brain in Settings (Task 2.5)
⑦ Open for business	Make it run once – Track A or Track B (Task 2.6)

Step	You learn	You leave with
① Destination	What “workflow” means	Same picture all afternoon
② Ladder	Don’t overbuild	A height for <i>this</i> job
③ Map + tags	Where AI vs rules vs you	Floor plan of the locked process
④ ETCSLV	Learn framework, then draft (esp. L & V)	Limits + validation you can test
⑤ Lock pattern	Simplest type that fits	One pattern name (not a menu of options)
⑥ Brain	Standing instructions	Settings that survive a new chat
⑦ Run	Trigger → result	A live path (automation or semi-auto)

Tools in Session 2: Teacher chat for 2.0–2.4 · chatbot Project (or NotebookLM if file-heavy) for 2.5 · **Track A** n8n/Make/Zapier clone **or Track B** semi-auto for 2.6.

2.1 What is an AI workflow? (the destination picture)

In plain words:

An AI workflow is a **repeatable path**: something starts the work → AI (and maybe other systems) do clear steps → a result appears where your team already works → a human still owns risk.

Analogy:

Reception → desk → manager approval. AI can sit at some desks; it should not steal the manager's approval.

Anatomy of a running workflow (remember this picture)

TRIGGER (form, email, sheet row, checklist)	AI / SYSTEMS (draft, extract, classify, route)	OUTPUT (Doc, Sheet, draft email, Slack)	HUMAN (approve / edit / reject)
--	---	--	------------------------------------

Corporate office examples

Trigger	AI step	Output	Human
New joiner Google Form	Draft day-1 checklist + welcome email	Doc + Gmail draft	HR reviews before send
Weekly bullets in Sheet	Turn into manager / client update	Google Doc draft	Manager signs off
Support ticket / shared inbox	Tag issue + draft SOP-based reply	Sheet column + draft mail	Agent / owner sends
Campaign brief in Drive	3 caption options + slide outline	Doc / Slides draft	Brand lead approves
Policy / handbook PDF	Answer staff FAQ with citations	Chat answer	Policy owner spot-checks

You will **not** automate yet. First you choose height (ladder), map steps, write rules, lock a pattern, and write the brain. Automation comes at **Task 2.6**.

2.3 Knowledge assistants & RAG (plain language)

Knowledge assistant: AI that answers using **your** documents (SOPs, product sheets, HR policy), not only public internet memory.

RAG (Retrieval-Augmented Generation) — one sentence:

Before answering, the system **finds relevant passages from your files**, then writes an answer grounded in those passages (ideally with citations).

Analogy:

Instead of guessing leave rules or expense policy from memory, the junior **opens the HR binder on the desk**, then drafts.

Good uses: leave/expense policy Q&A, onboarding FAQs, brand guidelines, product sheets your company uploaded.

Still your job: verify citations; update files when policy changes.

2.4 Reusable AI assistants & AI Projects

Idea	Meaning
Reusable assistant	Same role and rules every time (Settings / instructions)
AI Project	A container: instructions + files + ongoing chats for one job family
Workflow brain	Standing brief for one locked process (not the whole company handbook)

Identity rule for today:

Extend your Work Assistant **or** create **one** worker Project for the locked job — not five mystery bots.

2.5 Pattern ladder (how much structure?) — Step ②

 TASK 2.0 (~5 min) — Pattern ladder
Because: You locked one job — now ask how much structure <i>that</i> job needs (don't jump to n8n yet).
Do: In the same Teacher thread, send the roadmap Copy box. Note the level Teacher recommends below.
Done when: Recommended level noted. Mark roadmap 2.0 complete.

Climb only as high as *this* route needs:

- 1 Instruction-only chat
- 2 Knowledge assistant (your files)
- 3 Single workflow agent (clear steps + you approve)
- 4 Multi-agent / role handoff
- 5 Automation pipeline (trigger → run)

Bicycle → scooter → van → small fleet → factory. Do not buy a factory for a bicycle trip.

My locked pattern for today: e.g. *Type 3 Work buddy* — or *“Single workflow agent”* _____

Become a Manager of AI Agents · Participant Workbook · Sec 17

Worksheet C — Map your process — Step ③

Tag each step: ● AI thinking · ● rules / automation · ● human only.

TASK 2.1 (~10 min) — Map your process

Because: You chose a height on the ladder — now write the floor plan (steps) and tag who does what.

Do: In Teacher chat, send the roadmap **Copy** box with your steps (max 8). Accept or correct ● / ● / ● tags. Copy the map onto this canvas.

Done when: Map exists in Teacher chat + on this page. Mark roadmap **2.1** complete.

Map the process. Leave space. Messy is fine.

Row 1–4 show a starter path — replace with yours.

Process name: e.g. Weekly team update _____

#	Step	Who / what does it	● Green · ● Blue · ● Red
1	Trigger: Friday Sheet row / pasted bullets	Form / Sheet / me	●
2	AI drafts update from bullets	Work Assistant / workflow brain	●
3	Draft lands in Google Doc / email draft	Doc / Gmail	●
4	Manager checks numbers & tone, then sends	You	●
5			
6			
7			
8			

Key: ● Green = AI thinking (draft, summarize, rewrite) · ● Blue = rules / automation (forms, reminders, moving data) · ● Red = human only (send externally, money, hiring, legal)

Draw the flow (boxes and arrows)

Trigger

→

→

→

Human approval

(Use this space to redraw freely)

Still requires a human: e.g. Final send + any number that affects decisions _____

ETCSLV — Onboarding a new employee (and an AI helper on a desk process)

Use this page **after Worksheet C** (map) and **before Worksheet D** (ETCSLV draft).

Say the picture first:

Before you open a new role (or onboard a new hire), you decide: how hard is the work, which systems they touch, what they must always know, what files stay, what they may never do alone, and how you check quality.

Then the letters:

Letter	Name	Core question	New-employee analogy
E	Execution	Multiple reasoning steps or loops?	Is this a multi-step desk job or a one-line reply?
T	Tools	Which systems must they touch?	Email, Docs, Sheet, CRM, Forms...
C	Context	What must they always know?	Team goals, tone, forbidden claims
S	State	What must persist beyond one chat?	Last week's file, client prefs, ticket ID
L	Limits	What may they never do alone?	No send, no salary figures, no legal promises
V	Validation	How do we know it's correct?	Checklist, sample check, manager sign-off

Filled example — Weekly team / stakeholder update (common corporate)

	Example answer
E	Yes — gather bullets, rewrite, adjust tone
T	Email + Doc; optional input Sheet
C	Audience (boss / client), priorities, forbidden claims, brand tone
S	Last week's update file; known preferences
L	No send without manager approval; no invented metrics or headcount
V	Facts cited / source noted; tone OK; human signed off

Callout

Harness = the same ETCSLV checklist, named for shipping. You will reuse it in Session 3.

Worksheet D — ETCSLV draft — Step ④

Fill this **after** the ETCSLV Framework page (Sec 19) and Tasks **2.2–2.3**.

TASK 2.2 (~5 min) — First ETCSLV draft

Because: The map shows steps — now write the desk rules (especially **Limits** and **Validation**).

Do: In the same Teacher thread, send the roadmap **Copy** box — you fill E–T–C–S–L–V in your own words. Also fill this page. Be specific on **L** and **V**.

Done when: Draft written. Mark roadmap **2.2** complete.

TASK 2.3 (~10 min) — Teacher critiques ETCSLV

Because: First drafts of L/V are usually soft (“be careful”) — tighten until Monday-testable.

Do: Same thread — send the roadmap **Copy** box. Reply with updated **L** and **V** only (testable, not “be careful”).

Done when: Updated L + V are specific/testable. Mark roadmap **2.3** complete.

Starters below match a “weekly update” job — rewrite for your process. Be specific on L and V.

Letter	My answer for today’s process
E Execution	e.g. Yes — gather bullets, rewrite, adjust tone
T Tools	e.g. Sheet (inputs) + Doc/email draft
C Context	e.g. Audience = my manager; no invented metrics; friendly-professional
S State	e.g. Last week’s update file; recurring section headings (State = what must still exist next week)
L Limits	e.g. Never send; never invent headcount/revenue; ask if bullets missing (not just “be careful”)
V Validation	e.g. Checklist: every number has a Sheet source · I sign off before send

After Teacher critique — updated L & V (must be specific)

| **L** (revised) | |

| **V** (revised) | |

Hardest letter for me: often S, L, or V __ **because** _____

Become a Manager of AI Agents · Participant Workbook · Sec 20

2.7 Decision Tree — Find the simplest help — Step ⑤

TASK 2.4 (~15 min) — Decision tree + lock pattern

Because: Map + rules exist — triage picks **one** pattern room (don't collect options).

Do: Complete the Decision Tree on the **roadmap** (link on the task). Note the result. Send the roadmap **Copy** box to Teacher. Lock **one** pattern — do not collect options.

Done when: Pattern locked. Mark roadmap **2.4** complete.

Clinic triage: a few questions → the right room, not the whole hospital.

Start here

1. When this job is finished, what do you have?

- ☐ One message, doc, image, or answer → go to Q2
- ☐ Several steps until a sheet / inbox / status updates → go to Q3

2. Does AI need company files?

- ☐ No — I can paste in chat → **Type 1 · Quick helper**
- ☐ Yes — PDFs / sheets / scans → **Type 2 · Company brain**

3. How should multi-step work run?

- ☐ I approve each step → **Type 3 · Work buddy**
- ☐ Many similar items overnight → **Type 6 · Batch**
- ☐ Two different roles hand off → **Type 5 · Handoff**

(Types 4 and 7 appear for coding / quality-check jobs — see Reference section.)

My result

Type # and name	e.g. Type 3 · Work buddy
I will build today	e.g. Sheet bullets → AI draft Doc → I approve before email
Simpler than I expected?	☐ Yes ☐ No

Type cards (short)

Type	One-line meaning	Monday 15-min action
1 Quick helper	One good output; you check; send/save	Paste draft + 3 rules; one improved version
2 Company brain	Answers from your files + citations	Upload 3–5 PDFs; ask; verify one citation
3 Work buddy	Multi-step; you approve each sensitive step	Gather → AI draft → you approve → paste/send

Type	One-line meaning	Monday 15-min action
4 Coding helper	Ship/fix with tests as “done”	AI for PR text; code still through tests
5 Handoff	Two specialist roles; structured packet	Role A sources → Role B writes from packet only
6 Batch	Many similar items; morning sample-check	Trigger on new rows; review sample column
7 Quality checker	Score vs checklist; human decides	Pin rubric; never auto-pass unsure cases

TASK 2.5 (~30 min) — Build the workflow brain — Step ⑥

Because: Pattern is locked — write the **standing brief** for the AI step (Settings once). Still chatbot/NotebookLM here — not n8n yet.

Do: Send the roadmap **Copy** box to Teacher → paste **only** the system instructions into Settings for this job **once** (extend Work Assistant or one new Project; NotebookLM OK if file-heavy). Test a good example and a messy example.

Done when: Brain tested. Mark roadmap 2.5 complete.

2.8 Make it run — Track A or Track B — Step ⑦

In plain words:

Automation means the path can **start without you remembering** (“when the form hits reception, the file opens”). Day one stays humble: one trigger, one AI step, one output, one approval.

Manual WITH AI (Session 1)	THROUGH AI running path (now)
You open chat and paste	Something starts the path
You copy the result	Result lands where work lives
Easy to forget	You can re-trigger without the instructor

Track A vs Track B (pick one — both count)

	Track A — preferred	Track B — if automation is blocked
What	Clone facilitator’s n8n / Make / Zapier template	Semi-auto: checklist or form → AI draft in chat → you paste/send after review
When	Wi-Fi + tool access OK	Corporate laptop blocks automation, no time to wire tools, or IT forbids
Still must	Live-run once on screen	Live-run once on screen (show the draft + where you’d send it)

	Track A — preferred	Track B — if automation is blocked
Not enough	Architecture diagram only	Notes-only with no live AI output

⚡ TASK 2.6 (~30 min) — Automation path that runs

Because: Brain is tested — open the path once (automation **or** Track B semi-auto).

Do: Track A: clone facilitator template → wire your workflow-brain instructions into the AI step → live-run once.
Track B (if blocked): trigger checklist/form → AI produces the artifact in chat → you show paste/send after approval. Then send the roadmap **Copy** box to Teacher for a short review.

Done when: You can re-trigger (or re-run the Track B path) without the instructor. Mark roadmap **2.6** complete.

My track today: ☐ A (n8n/Make/Zapier) · ☐ B (semi-auto chatbot)

Become a Manager of AI Agents · Participant Workbook · Sec 21

Quick share — Workflow spotlight (5–10 min)

Everyone works **on their own**. No pair work.

When the instructor asks, a **volunteer** — or someone **picked at random** — explains their workflow to the room in about **60 seconds**:

1. What is the locked process?
2. Where is the **human approval** (🔴)?
3. What must AI **never invent**?

Listeners: note one idea you might steal for your own L or V.

Idea I heard that I might use:

I will change in my L or V:

Section 2 — Reflection

1. Did the decision tree push me simpler or more complex?
-

2. Can I demo trigger → AI → output once? ☐ Yes ☐ Not yet — blocker: _____

Extra notes — Section 2

Become a Manager of AI Agents · Participant Workbook · Sec 22

SECTION 3 — Work BY AI

 **TASK 3.0 (~5 min) — Manager of agents (framing)**

Do: Follow the instructor, then send the roadmap **Copy** box in Teacher chat. Listen for: you manage roles + rules + evaluation; AI does the drafting.

Done when: Framing heard. Mark roadmap **3.0** complete.

Goal: Manage AI like a small team — roles, harness, failure drill, then ship.

3.1 From helper to workforce

Manager truth:
You do not personally write every email, check every cell, and design every slide. You **coordinate specialists**, set standards, and own exceptions.

Managing AI is the same:

Model	+	Memory	+	Tools	+	Workflow	+	Evaluation
which		what it		systems		the path		how you
brain		must know		it may		it follows		know it's
you use		/ remember		touch				good enough

Piece	Manager question
Model	Which AI for draft vs judgment-heavy critique?
Memory	What files and standing rules?
Tools	Sheet, Doc, Form, email draft — which ones?
Workflow	Trigger → steps → output
Evaluation	Checklist, sample audit, Demo Day criteria

3.2 AI workers & AI teams

Specialist roles (use only what you need)

Role	Job	Human parallel
Planner	Break work into steps / outline	Team lead planning the day
Researcher	Gather facts from allowed sources	Analyst pulling data

Role	Job	Human parallel
Writer	Draft the customer- or manager-facing text	Communications
Reviewer	Check tone, policy, completeness	Peer review
Evaluator	Score against a rubric / checklist	QA / compliance checker
Human manager	Approves, rejects, escalates	You

Corporate sketch A — New joiner onboarding pack

Role	Does
Researcher	Pull day-1 checklist from approved HR handbook
Writer	Draft welcome email + checklist
Reviewer	Flag any salary / benefit language that was not provided
Human manager (HR)	Sends or edits

Corporate sketch B — Weekly management update

Role	Does
Planner	Outline sections: wins, risks, asks
Writer	Draft narrative from team bullets
Evaluator	Check “no invented numbers” against the Sheet
Human manager	Approves before email / Slack post

Callout

Minimum roster. Extra agents create coordination cost. Prefer **one running path** over a 16-agent swarm.

Worksheet F — AI Workforce Canvas

 **TASK 3.1 (~15 min) — Design your AI workforce**

Do: In Teacher chat, send the roadmap **Copy** box (3–5 roles max). Let Teacher cut extras. Delete any role you cannot explain in one sentence. Fill this canvas.

Done when: Minimum role list named. Mark roadmap **3.1** complete.

Minimum roster. Starters assume weekly update — cut roles you don’t need.

Field	Your design
Locked process	e.g. Weekly team update
Human manager	e.g. Me
Roles I will use (circle)	Planner · Researcher · Writer · Reviewer · Evaluator · Other: _____
Handoff packet (what passes between roles)	e.g. Bullets + sources → draft text only (no new facts)
Tools per role	e.g. Writer: Claude · Evaluator: checklist in Sheet
Limits (shared)	e.g. No external send; no invented numbers
Validation (shared)	e.g. Every figure has a source row · human approves
Cost note (\$ cheap draft vs \$\$\$ careful review)	e.g. \$ draft · \$\$\$ only for board-facing rewrite

Swimlane sketch

Planner

: *e.g. Outline: wins / risks / asks*

Researcher

: *(optional)* *Pull last week’s file / Sheet totals*

Writer

: *Draft narrative from packet only*

Reviewer

: *Flag tone + any claim without source*

Human

: *Approve / edit / send*

Worksheet E — Harness Card (shipping name for ETCSLV)

TASK 3.2 (~15 min) — Harness Card via Q&A

Do: In Teacher chat, send the roadmap **Copy** box. Answer one letter at a time. Harness = same ETCSLV, shipping name. Fill this card as you go.

Done when: L and V are clear enough to demo. Mark roadmap **3.2** complete.

Same letters. Now written as job rules for the process that must run.

Middle column = example to steal. Right column = blank lines for your answers.

Field	Example (starter)	Write yours
Workflow name	<i>Friday Team Update Draft</i>	_____ _____
Owner (human manager)	<i>Me (Ops Lead)</i>	_____ _____
E How hard / multi-step?	<i>Multi-step: collect → draft → tone pass</i>	_____ _____
T Tools (+ cheap vs expensive)	<i>\$ Sheet+Doc draft · \$\$\$ only if legal review</i>	_____ _____
C Always-on context	<i>Audience, forbidden claims, section template</i>	_____ _____ _____
S What must persist	<i>Last update file + standing Settings</i>	_____ _____ _____
L Hard limits / approvals	<i>No send; no invented metrics; escalate missing bullets</i>	_____ _____ _____
V How we validate	<i>Number-source checklist + human sign-off</i>	_____ _____ _____
Failure test I will try	<i>Submit empty bullets / ask it to invent a %</i>	_____ _____
Pass / fail rule	<i>Pass only if it asks for missing input and refuses invented %</i>	_____

Field	Example (starter)	Write yours

Become a Manager of AI Agents · Participant Workbook · Sec 25

3.3 Failure Lab

TASK 3.3 (~20 min) — Failure lab

Do: Trigger **two** failures on your running workflow. Fix instructions or the path. Use the roadmap **Copy** box only if stuck.

Done when: Two lines written: What broke → Fix applied. Mark roadmap **3.3** complete.

Analogy: Mystery-shopper / fire drill on your own process — break it on purpose before Monday does.

Attack	Example	What I observed	Fix
Missing input	Empty bullets		
Messy / Bangla-English mix	<i>e.g. Half Bangla WhatsApp paste</i>		
Forbidden ask	“Promise a salary / discount we never approved”		
Overconfident draft	Invented metric		

One fix I shipped after Failure Lab:

Worksheet G — Capstone (ship the running workflow)

TASK 3.4 (~30 min) — Capstone: ship + demo script

Do: Re-run the happy path twice without the instructor. Confirm trigger · AI · real output place · human approval. Fill the capstone fields and use the roadmap **Copy** box for a 60-second demo script.

Done when: Definition-of-done checklist complete. Mark roadmap **3.4** complete.

TASK 3.5 (~20 min) — Demo Day + peer review

Do: Live-demo trigger → AI → output → human approval (or recording from last 10 min). Say: pain → run → who approves → one risk you fixed. Peer notes one strength + one improvement.

Done when: Demo shown + peer row filled. Mark roadmap **3.5** complete.

Definition of done

- [] Trigger is real (form / sheet / paste / email label — as designed)
- [] AI step uses standing instructions (workflow brain)
- [] Output lands where work lives
- [] Human approval step is visible
- [] I can re-run without the instructor

- [] L and V match what I built

Capstone field	Answer
Demo title (5 words)	<i>e.g. Friday Update Auto-Draft</i>
Trigger	<i>e.g. New row in "Weekly Bullets" Sheet / pasted notes</i>
AI does	<i>e.g. Writes manager update from bullets using Settings rules</i>
Output location	<i>e.g. Google Doc body / Gmail draft</i>
Human must still...	<i>e.g. Check every number and click Send</i>
Link / screenshot note	
Biggest risk remaining	<i>e.g. Someone pastes incomplete bullets and still trusts the draft</i>

Demo Day script (60–90 seconds)

1. Problem: *e.g. Friday scramble from WhatsApp notes* _____
2. Show trigger: *e.g. I add a Sheet row / paste bullets* _____
3. Show output: *e.g. Draft appears in Doc* _____
4. Show human gate: *e.g. I refuse to send until numbers checked* _____
5. Monday next step: *e.g. Run it once with real team bullets* _____

Peer review received

Strength	Improvement

Become a Manager of AI Agents · Participant Workbook · Sec 26

Checklist H — AI Delegation Checklist

Before you delegate a task to AI (assistant or workflow):

Brief

- ☐ Role and outcome are clear
- ☐ Audience and tone set
- ☐ Forbidden content listed
- ☐ Output format specified

Safety

- ☐ No unnecessary PII in the prompt
- ☐ Red steps marked human-only
- ☐ Hallucination checks for numbers / policy

Operate

- ☐ Right tool for this job (≤ 3)
- ☐ Memory / files attached if required
- ☐ Validation method named (V)
- ☐ Someone owns exceptions (you)

Ship

- ☐ Ran once successfully
- ☐ Failure case tested once
- ☐ Documented in one paragraph for your future self

Worksheet I — Personal AI Adoption Plan (seed for 30 days)

17 TASK 3.6 (~10 min) — 30-day AI adoption plan

Do: Send the roadmap **Copy** box in Teacher chat. Fill this seed plan. Complete the full calendar on **Page 32 (R7)**. Circle the Week 1 action you will actually do.

Done when: Tomorrow + this week filled. Mark roadmap **3.6** complete.

Horizon	Commitment
Tomorrow	<i>e.g. Use Work Assistant on 1 real email before lunch</i>
This week	<i>e.g. Attach 3 SOPs/files; run my workflow once</i>
Next 30 days	<i>e.g. Friday ritual: trigger → draft → approve</i>

Horizon	Commitment
I will stop doing...	e.g. Pasting customer/employee PII into public chat
I will measure success by...	e.g. Time to first usable draft under 10 minutes
Accountability buddy	e.g. Desk neighbor / team lead

(Full calendar is in the Reference section — complete it before you leave.)

Section 3 — Reflection

1. As a manager of AI, my most important skill is:

2. One process I will **not** automate yet:

Extra notes – Section 3

END OF BOOKLET — Reference Cards

Tear-out style pages. Keep using after the workshop.

R1 — Prompt Cheat Sheet

CTAO

Context: I am [role] at [org type] working on [topic].
Task: [verb] [object].
Audience / constraints: [tone, language, length, never invent X].
Output: [format, number of options, sections].

Power add-ons

Need	Add this line
Less invention	"If unknown, say unknown. Do not invent numbers or policy."
Better structure	"Use headings + bullets. Max one page."
Bangla quality	"Natural Bangla, not literal translation. Avoid awkward formalisms."
Critique mode	"List weaknesses first. Then rewrite once."
Use prior context	"Use my process from earlier in this chat. Don't ask me to re-paste unless critical."
Manager gate	"End with: Risks / What a human must check."

Stop → Read → Decide before you paste into email, CRM, or WhatsApp.

Become a Manager of AI Agents · Participant Workbook · Sec 28

R2 — AI Tool Selection Matrix

If your job needs...	Start with	Also consider	Avoid for this job
Fast draft / rewrite	ChatGPT or Claude	Gemini	Over-tooling
Long policy reading	Claude or ChatGPT (+ file)	NotebookLM	Blind trust without cite
Answers from <i>your</i> SOP pack	NotebookLM / Project files	Claude/ChatGPT Projects	Pure web chat with no upload
Web research + links	Perplexity	Gemini	Treating snippets as audited fact
Slides / visuals	Gemini / Gamma / ChatGPT images	—	Perfect brand compliance without review
Recurring trigger	Zapier / Make / n8n + Doc/Sheet	—	Multi-agent complexity on day 1

Max 2–3 tools for one workflow.

R3 — AI Workflow Checklist

- ☐ One locked process named
- ☐ Trigger defined
- ☐ Steps mapped (●/●/●)
- ☐ ETCSLV drafted — L & V specific
- ☐ Pattern / Type chosen (simplest that works)
- ☐ Workflow brain in Settings (once)
- ☐ Happy path tested
- ☐ Messy path tested
- ☐ Output location correct
- ☐ Human approval visible
- ☐ Owner named for exceptions

Key: ● Green = AI thinking · ● Blue = rules / automation · ● Red = human only

Become a Manager of AI Agents · Participant Workbook · Sec 29

R4 — ETCSLV One-Page Summary

	Question	Onboarding analogy
E Execution	Multi-step reasoning?	How hard is the desk job?
T Tools	Which systems?	Email, Sheet, CRM...
C Context	Always know what?	Product + tone + taboos
S State	What persists?	Last file, ticket ID, prefs
L Limits	Never alone?	No send / no money / no legal
V Validation	Correct how?	Checklist + human sign-off

Harness = ETCSLV with a shipping name for the live process.

R5 — AI Decision Tree (pocket)

```

Finished output = ONE thing?
├─ Needs company files? – No → Type 1 Quick helper
└─ Yes → Type 2 Company brain
  └─ MANY steps?
    ├── I approve each step → Type 3 Work buddy
    ├── Overnight many items → Type 6 Batch
    └─ Two specialist roles → Type 5 Handoff

Special cases: coding → Type 4 · rubric QA → Type 7
  
```

Become a Manager of AI Agents · Participant Workbook · Sec 30

R6 — AI Ethics & Privacy Checklist

Before you paste

- ☐ No full NID / passport / card / salary / medical details unless approved channel
- ☐ No passwords, OTPs, or system credentials
- ☐ No confidential contracts, credit files, or unreleased board packs in personal tool accounts
- ☐ Minimize personal data — mask where possible
- ☐ Respect employer AI / data policy

Before you publish or send

- ☐ No invented policy, legal, or regulatory claims
- ☐ Marketing / employer-brand claims checked
- ☐ Respectful language for staff, candidates, customers, vendors
- ☐ Human accountable name on external messages
- ☐ Sources retained for audit if needed

If unsure: ask compliance / IT / your manager — do not “just try it” with live employee or customer data.

Become a Manager of AI Agents · Participant Workbook · Sec 31

R7 — 30-Day Personal AI Adoption Plan

Theme for 30 days: e.g. “One Friday workflow I can re-run without thinking” _____

Week	Focus	Concrete actions	Done
Week 1	WITH — daily helper	Use Work Assistant on 3 real tasks; CTAO prompts; Stop→Read→Decide	☐
Week 2	Memory & tools	Attach 3 key files; cut tool stack to ≤3; one NotebookLM or Project brain	☐
Week 3	THROUGH — one workflow	Map steps; ETCSLV; run trigger→AI→output once per week	☐
Week 4	BY — manage	Failure drill; peer review; decide keep / kill / improve	☐

Cadence

Ritual	When	Notes
15-min AI practice	☐ Daily ☐ 3× week	
Weekly workflow run	Day: ____	
Review L & V	Every Friday	
Share one win	With: ____	

Metrics (pick 2)

- ☐ Hours saved on _____
- ☐ Cycle time for _____
- ☐ Error / rewrite rate down
- ☐ Team adoption (people using the assistant): _____

Month-end decision

Keep	Improve	Stop

Signature (optional commitment)

I will treat AI as staff I manage — briefed, limited, and reviewed.

Name: ____ **Date:** ____

Become a Manager of AI Agents · Participant Workbook · Sec 32

R8 — Corporate office scenario bank (inspiration only)

Pick a row close to your job. Banking/finance people can still use the Finance / Credit row.

Domain	WITH AI (help at your desk)	THROUGH AI (path that runs)	Human approval
HR / Admin	Offer / joining letter from template + sheet row	Form → onboarding checklist Doc → HR queue	HR verifies compensation & dates
Team lead / Manager	Weekly update from Slack/WhatsApp notes	Friday Sheet bullets → manager email draft	You send after number check
Operations	Meeting notes → owners + deadlines	Shared inbox / Form → tagged queue + draft reply	Ops owner sends / assigns
Customer / vendor support	Rewrite angry email calmly	Ticket → SOP draft reply	Agent sends
Marketing / Comms	3 caption options; slide outline from brief	Brief → draft pack → brand review folder	Brand / compliance approves
Sales / BD	Visit notes → polite follow-up	Lead Form → welcome pack draft → CRM note	RM / AE personalizes & sends
Analyst / Strategy	“What changed vs last month?” from export	Dirty CSV → cleaned table → insight bullets	Analyst owns the numbers
Finance / Accounts	Narrative for P&L bullets; vendor chase email	Receipt photos / Sheet → exception list	Finance lead confirms totals
Internal reporting	Bullets → management narrative	Monthly pack sections auto-drafted	Manager validates figures
Learning / L&D	Lesson plan from syllabus PDF	Feedback drafts scored to rubric	Facilitator overrides edge cases
IT / Admin support	Soft reboot / access FAQ from SOP	Ticket form → category + first reply draft	IT agent closes or escalates
Finance institutions (optional)	Document chase; product FAQ draft	Inquiry Form → checklist Doc → RM queue	RM sends; credit decision stays human

Everyday Bangladesh workplace patterns (any industry)

Familiar pattern	How AI helps	Still human
Office WhatsApp chaos → Monday plan	Clean action list by owner	You assign & chase
Vendor / procurement follow-ups	Polite reminder drafts	Commercial terms stay yours
New employee first-week confusion	Handbook Q&A with citations	HR owns exceptions

Familiar pattern	How AI helps	Still human
Leadership Friday review	Slide outline + speaker notes	Leaders own the story
Shared mailbox overload	Tag + draft; batch overnight	Spot-check sample before trust

R9 — Glossary (one line each)

Term	Meaning
Generative AI	AI that creates new text/media from prompts
Prompt	Your work brief to the AI
Hallucination	Confident false detail
Human-in-the-loop	Person must approve risky steps
Project / Settings	Standing job brief + files
Knowledge assistant	Answers from your documents
RAG	Find relevant file passages, then answer
Workflow	Trigger → steps → output
Automation	Path starts without you remembering
ETCSLV	Execution, Tools, Context, State, Limits, Validation
Harness	ETCSLV structure to manage agents
Agent (workshop sense)	AI following a routed process with rules

Day Roadmap — How every piece connects

One page. Same job all day. Escalate — don't restart.

OPEN 0.0–0.4 Hire coach + name roles + lock ONE job	WITH AI 1.1–1.6 Hire helper + lock ONE job	THROUGH AI 2.0–2.6 Make the JOB run on a clear path	BY AI 3.0–3.6 Manage the team + ship + demo
---	--	---	---

Stage	You learn	You build	Why the next step exists
0 Open	What AI is · chat vs assistant vs agent	Teacher Project (Settings once) + kickoff chat	You need a coach before you hire a worker
1 WITH	Brief · feedback once · lock one job · tools ≤3 · memory	Work Assistant + locked process (1.4)	You must feel AI at your elbow <i>and</i> commit one job before automating
2 THROUGH	Map ●●●● · ETCSLV · pattern · brain · run	Trigger → AI → output → human approval	The locked job becomes a path that runs , not a blank chat every time
3 BY	Roles · harness (= ETCSLV for shipping) · failure · demo	Minimum AI roster + re-runnable capstone	Managers don't do every draft — they set roles, limits, and quality

The spine (read left → right)

①	②	③	④	⑤	⑥
Teacher coaches you	Work Assistant does daily drafts	Lock one process	Map + ETCSLV = process map + rules	Brain + automation = standing brief + trigger	Workforce + harness = manage & ship

Teacher vs Work Assistant (don't mix them up)

	Teacher Agent	Work Assistant
Job	Coach / critique / explain	Do <i>your</i> real work
When	Same one chat thread all day	Session 1 runs + later as your worker
Switch	—	Once at Task 1.3 (feedback round), not every task

Task chain at a glance

	Tasks	Connection
	0.0→0.4	Orient → open desk → hire Teacher → contract → name chat/assistant/agent
	1.1→1.6	Brief → hire Work Assistant → feedback once → lock job → tools → memory <i>for that job</i>

	Tasks	Connection
	2.0→2.6	How tall? → map → draft E-V → critique → pick pattern → brain → run once
	3.0→3.6	Manager mindset → roster → harness → break it → ship → demo → 30-day plan

Remember: Product of the day = one **running** workflow for the process you locked at 1.4. Notes alone are not enough.

Parking lot (questions for instructor / IT / compliance)

Wins to tell my team on Monday

1.

2.

3.

Closing reminder

Work WITH AI → brief clearly, review always
Work THROUGH AI → one path that runs
Work BY AI → roles + limits + evaluation

You are the manager.
AI is the workforce.
Final approval is still yours.

Thank you for investing a day in building your personal AI workforce.
